GE Phoenix Gated Audio Amplifier
Designed by John J. Riddell VE3AMZ
Redrawn by Robert W. Meister WA1MIK

Note: All capacitor values are in uF; 50V.
All resistors are 1/4w unless specified.
The Audio Input goes to the GE Phoenix Volume "HI" unsquelched pin HL-35. The 10K potentiometer controls the audio level. The Squelch Input goes to the GE Phoenix pin HL-58. This signal is 0V when the squelch is closed, and +6V when the squelch is open. Gain is ~17dB and is flat from 50 Hz to 20 kHz.
