CIRCUIT DESCRIPTION

RX SECTION

The input signal from the antenna passes through the LPF (Low Pass Filter) of the final unit (X45-1360-01), the transmit/receive diode switch D3 MI308, and goes into the front end on the A-unit (X44-1590-11). The front end consists of an RF amplifier comprising of a gallium arsenide FET RF amplifier Q1 : 3SK97 (Q2) *J, ANTENNA coils L1 and L2 and a 2 MHz band width helical resonator L3.

After obtaining both good sensitivity and 2-signal characteristics through the front end, the signal is applied to the first mixer Q2 : 3SK74 (L), where it is mixed with the PLL output 133.305 -135.295 MHz (T,W), 131.305 ~ 138.300 MHz (K,M), and the output becomes the first IF signal at 10.695 MHz. After passing through the 2-stage MCF (Monolithic Crystal Filter), the first IF signal is amplified by Q3 : 2SK192A (GR) * N, mixed with the local oscillator (10.24 MHz) Q25 : 2SC2668 (Y), and becomes the second IF signal at 455 kHz. The 10.240 MHz second local oscillator frequency is also used by the PLL (Phase locked loop) for the comparator reference signal. The second IF signal passes through the ceramic filter (CFV455F), IF amplified by (Q5, 6 : 2SC2787 (L), Q7 : 2SC2668 (Y)) and IC1 : μPC577H, and detected by ceramic discriminator (CFY-455S).

The detected output from the discriminator is divided into the audio frequency component and a noise component. The audio frequency component is de-emphasised and, preamplified by Q32 : 2SC2458 (Y) before delivery to be amplified by IC3 : MB3712 which drives the speaker.

The noise component is extracted through (Band Pass Filter), amplified by noise amplifier Q27, 28 : 2SC3113 (B), and rectified by D10, 11 to achieve the squelch signal. The squelch control signal is then used to control SQUELCH SWITCH Q29 : 2SC2458 (Y), which in turn controls AF preamplifier Q32. Q30,31 : 2SC3113 (B) are DC amplifier for the busy indicator. Q33 : 2SC2458 (Y) prevents transient "clicks" when the priority watch function operates and also mute the receiver audio during DCS system code squelch operation.

| Item | Raling |
|-------------------------------|-------------------------------------|
| Nominal center frequency | 455 kHz |
| 3 dB band-width | ± 4.2 kHz or more (from 455 kHz) |
| 6 dB band-width | ± 6 kHz or more (from 455 kHz) |
| 60 dB band-width | ± 12 kHz or less (from 455 kHz) |
| Ripple (within 455 ± 4.2 kHz) | 3 dB less |
| Loss | 6 dB or less |
| Guaranteed attenuation | 50 dB or more (within 455 ± 100kHz) |
| Input/output impedance | 1.5 kΩ |

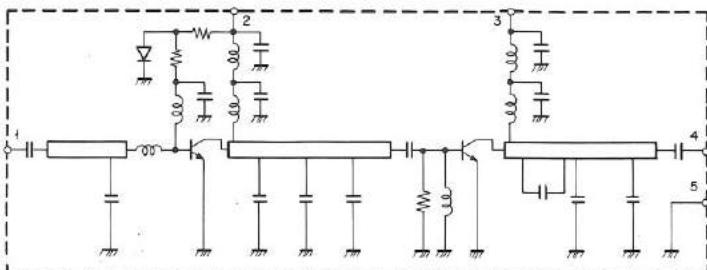

Table 1 Characteristics of Ceramic Filter (L72-0342-05)
CFV455 (A-unit : L7)

TX SECTION

The signal from the microphone is amplified by microphone limiting amplifier Q9 : 2SC1775 (E) and Q40 : 2SO2458 (Y) IC4 (1/2) : μPC4558C on the B-unit (X53-1380-11). Then LPF (low-pass filter) IC4 (1/2) : μPC4558C filters the higher audio frequencies to phase modulates the transmitting PLL loop of the A unit (X44-1590-11). Q12 : 2SC2458(Y) is used to cut the microphone input at transmission of the F2 control signal which is generated at both PTT (Push to talk) DCS system is used. Q11 : 2SC2458 amplifies a part of the microphone output and forms a microphone visual check function circuit. The phase modulated FM signal is amplified by the VCO buffer Q14 : 2SC2668 (Y) on the A-unit (X44-1590-00) before being amplified by drivers Q1 : 2SC2347 and Q2 : 2SC2538-22-A, on the B-unit (X53-1380-11) to yield the output for the final unit (X45-1360-01). The signal fed to the Final unit is amplified by the power hybrid Q1 : M57737. The signal is then passed through the transmit/receive diode D1 and before going through a 3-stage LPF and then fed to the antenna.

The APC (Automatic Power Control) circuit performs HI/LOW power control section and SWR protection. The output from the detected by power amplifier is sampled through C8 detected by D4, and applied to differential amplifier Q5, 6 : 2SC2458 (Y). The protection circuit detects the reflected wave from the antenna terminal, and the detected signal is applied to the differential amplifier Q5,6 through the B-unit DC amplifier Q8 : 2SC2458 (Y).

The differential amplifier controls Q4 : 2SA1015 (Y) and Q3 : 2SD880 (Y), which varies the voltages to Q1 pin 2 on the final unit and Q2 collector voltage on B-unit, thereby controlling the transmission output.

CIRCUIT DESCRIPTION

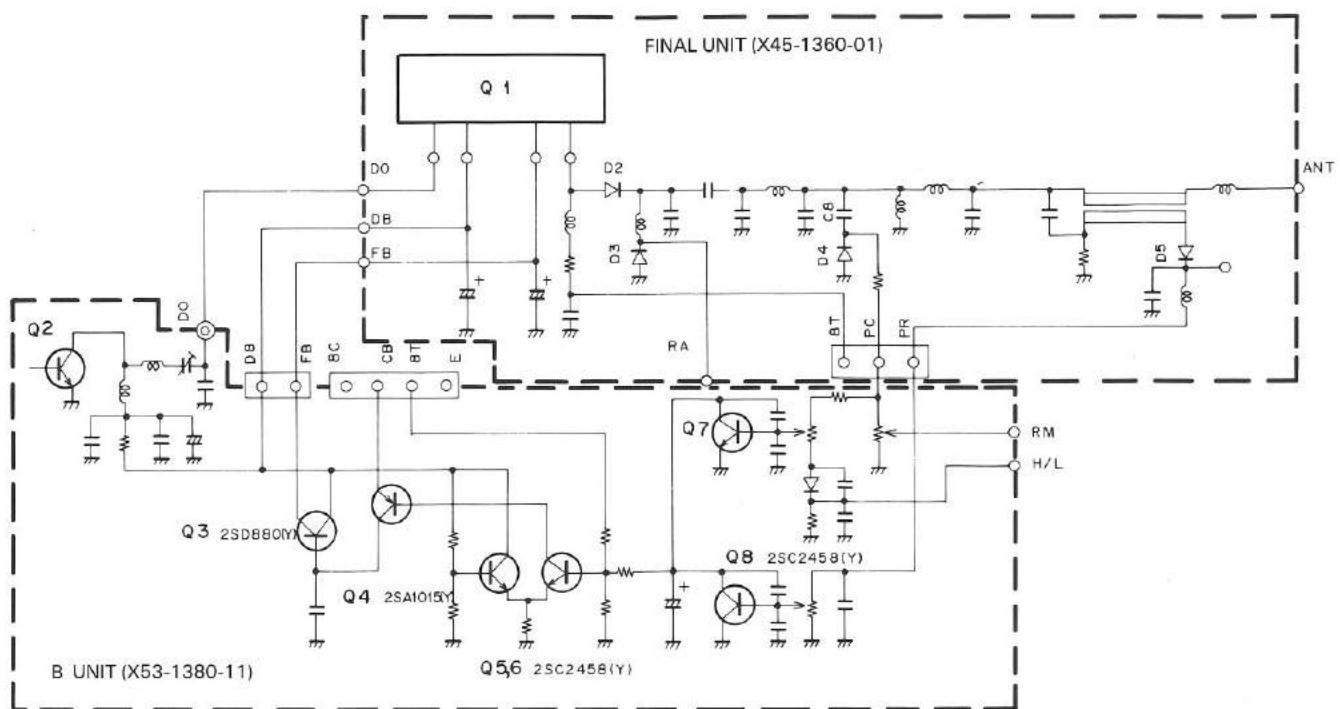

Fig. 1 APC, Protection Circuit

PLL SECTION

The PLL block diagram is given in Fig. 2. The PLL circuit uses two VCO within one PLL system for an independent RX VCO and TX VCO.

● OSC circuit

Receiving and transmitting oscillators are selected by supplying 8R and 8T voltages at reception and transmission. The multiplier Q22 : 2SC2668 (Y) (T,W) is common to both oscillators. A 40.8267 MHz (T,W), 59.740 MHz (K,M) heterodyne signal is generated by Q24 : 2SC2668 (Y) for reception. A 44.3917 MHz (T,W), 43.3917 MHz (K,M) heterodyne signal is generated by Q23 : 2SC2668 (Y) for transmission. For either transmission or reception, this frequency is tripled [to 122.48 MHz for reception, 133.175 MHz for transmission (T,W)] before being input to the mixer Q21 : 2SC2668 (Y). Also this frequency is doubled [to 119.48 MHz for reception and tripled to 130.175 MHz (K,M)] before being input to the mixer Q21 : 2SC2668 (Y).

● VCO circuit

The VCO circuit oscillates 133.305 - 135.295 MHz (T,W), 131.305 ~ 138.300 MHz (K,M) by Q8 : 2SK192A (GR)*N for reception, and 144.00 - 145.995 MHz (T,W), 142.00 ~ 148.995 MHz (K,M) by Q12 : 2SK192A (GR)*N for transmission. These frequencies are applied to mixer Q21 through buffer amplifier Q13 : 2SC2668 (Y), which is common to transmission and reception. Q9 : 2SC2458 (Y) connected to Q8 source works to stop Q8 oscillation momentarily when changing from receiving mode to transmitting mode.

The RX VCO signal is amplified by Q11 : 2SC2668 (Y)

through buffer amplifier Q10 : 2SC2668 (Y) and is applied to the first IF mixer. The TX VCO signal is amplified by Q14 : 2SC2668 (Y) and applied to the drive circuit on the B-unit. The local oscillator signals are tripled in RX : 122.48 MHz, TX : 133.175 MHz (T,W), also local oscillator signal are doubled in RX : 119.48 MHz, tripled in TX 130.175 MHz and the VCO outputs RX : 133.305 - 135.300 MHz (T,W), 131.305 ~ 138.300 MHz (K,M), TX : 144.00 - 145.995 MHz (T,W), 142.00 ~ 148.995 MHz (K,M) output by the RX VCO and TX VCO are mixed by Q21, to become PLL IF signal 10.825 - 12.815 MHz (T,W), 11.825 ~ 18.82 MHz (K,M). This is amplified by Q20 : 2SC2668 (Y) and input to the Phase Detector IC : MC145155P*J(IC2).

IC2 amplifies the second IF local oscillator signal (10.24 MHz) from Q26 : 2SC2668 (Y) and divides this by 1/2048. This yields a 5 kHz reference comparison signal. Simultaneously, the PLL IF signal 10.825 - 12.815 MHz (T,W), 11.825 ~ 18.82 MHz (K,M) is divided down to 5 kHz comparison signal by a ratio of N = 2165 - 2563 (T,W), N = 2365 ~ 3764 (K,M) from the control data supplied by the microprocessor (μPD7508G-620-00). Finally the PLL IF signal phase is compared with the reference signal for VCO control. The phase compared output signal is passed through LPF Q17, 18 : 2SC2458 (Y) and Q19 : 2SC2458 (L) (L), and is applied as the VCO control voltage to voltage variable diode D5 : 1SV50 during reception, and D6 : 1SV50 during transmission, to control the oscillator frequency of each VCO.

CIRCUIT DESCRIPTION

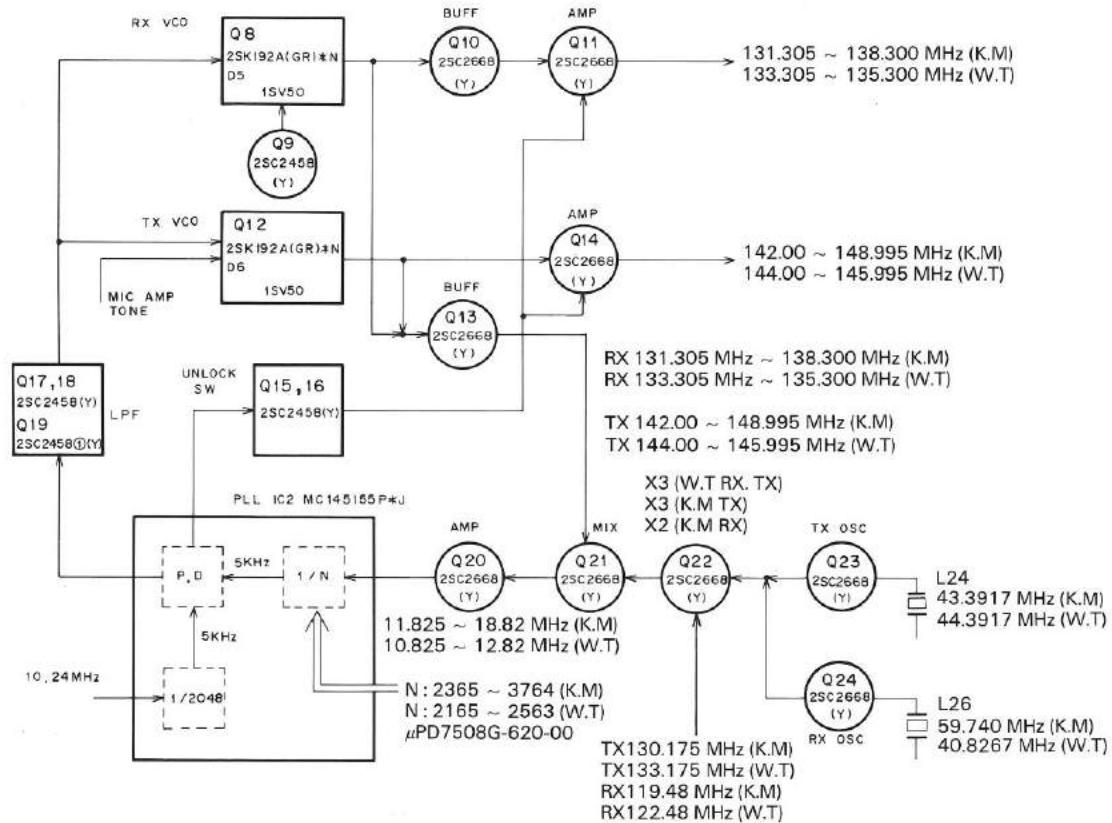

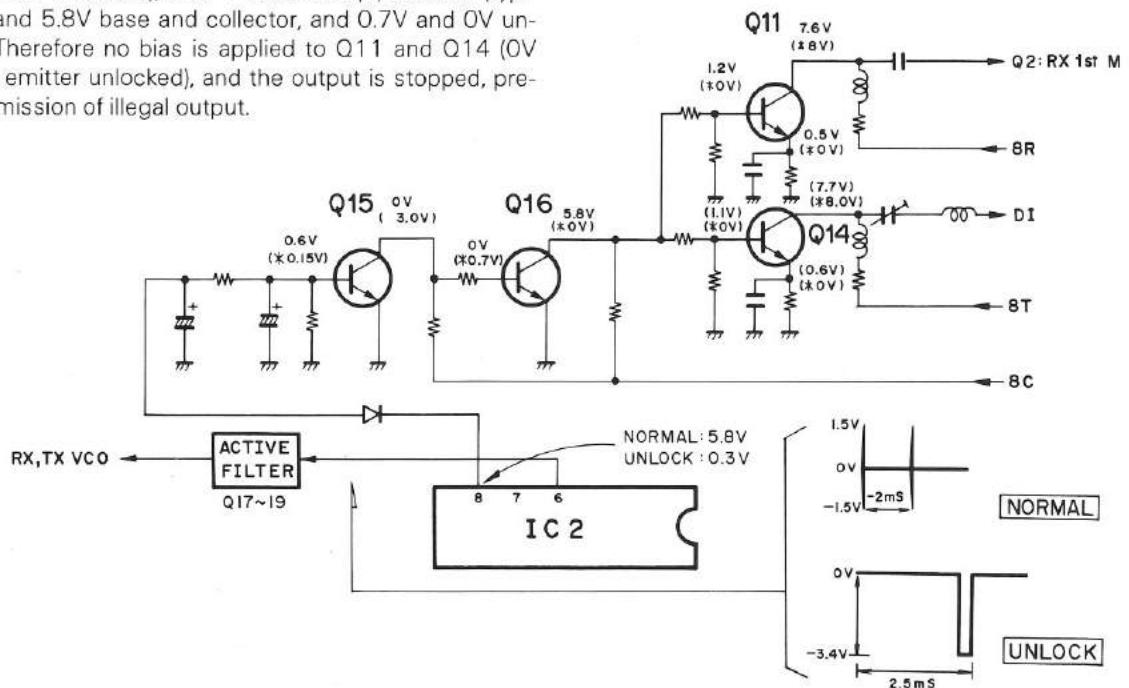

Fig. 2 PLL circuit block diagram

UNLOCK CIRCUIT

If the PLL loop unlocks, IC2 pin 8 becomes low level (typically 5.8V locked and 0.3V unlocked), Q15 : 2SC2458 (Y) turns off (typically 0.6V and 0V base and collector, and 0.15V and 3V unlocked), Q16 : 2SC2458 (Y) turns on (typically 0V and 5.8V base and collector, and 0.7V and 0V unlocked). Therefore no bias is applied to Q11 and Q14 (0V base and emitter unlocked), and the output is stopped, preventing emission of illegal output.

CIRCUIT DESCRIPTION

CONTROL CIRCUIT

● Display

The display system consists of 5 LED digit dynamically driven. The LED segment drive signals are output as a "L" at ports P40 ~ P43, P50 ~ P53 of (μ PD7508G-620-00) of B-unit (X53-1380-11). This drives digital transistor Q1 - 8: DTA143X on the display unit. The digit signal is output as a "L" at ports P30 ~ P33 and P60, and drives Q9 - Q13: 2SA1150 (Y) on the display unit. Displays of over range, the MHz decimal, PR.W, CAL and standby are also made by dynamically lighted.

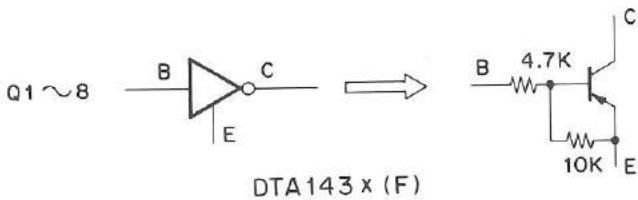

Fig. 3 Digital TR DTA143X(F)

● Encoder

The mechanical encoder is outputs 25 pulses with 50 clicks to one cycle. Any chatter in the encoder output is eliminated by Schmitt trigger circuit IC5 : (M-C14069UBCP or TC4069UBP) on the B-unit (X53-1380-11). This output is directly applied to microprocessor ports P10 and P11. The direction UP or DOWN of encoder is internally judged by microprocessor software.

● Switch signal

Scanned key scan output pulses are applied to the input port extending IC1 : LC7800 on the display unit (X54-1810-11). The output data is generated from O₀ ~ O₃ and is applied to IC1 : μ PD7508G-620-00 P70 ~ P73 on the B-unit (X53-1380-11).

● Beep Tone

The tone sound is generated by a stable multivibrator IC6 : TC4001BP(1/2) on the B-unit. The switching signal is generated from P22. The tone frequency is determined by R47 and C62.

● Memory Back-up circuit

The back-up circuit detects voltage drop at the INT0 terminal of microprocessor IC1 : μ PD7508G-620-00 on the B-unit, and goes into back-up mode. In the back-up mode, system clock oscillation is stopped, the output port goes low and the input/output port goes into the input/output state. When the INT0 terminal voltage increases, back-up mode is reset, the normal operational state is regained, and PLL data is once again output.

● Reset circuit

After supplying V_{DD} voltage to microprocessor IC1 : μ PD7508G-620-00, apply V_{DD} to the RESET terminal for approximately 0.5 second to reset that IC. For resetting the DCS system microprocessor IC2 : μ PD7507G-575-00, IC1 P30 and P32 are applied to IC2 RESET terminal via IC6 NOR gate.

● TU-3A (Option)

IC2 P23 goes high and enables the first tone with the COM switch ON, and IC2 P22 goes high to enable the second tone with the shift switch ON.

CIRCUIT DESCRIPTION

● DCS system key

All four system operating keys (DCS, DSQ, CS and R) are input to IC1 (LC7800) ports on the display unit. The outputs ($O_0 \sim O_3$) are connected to IC1 on the display unit. By operating these four keys, a Low is output from IC2 P50 ~ P53 on the B-unit (based on the microprocessor software), and these signals are driven by Q14 ~ Q16 and Q20 to light on the display unit LEDs D5 ~ D8.

● Digital squelch operation

(A) : A-unit, (B) : unit

Transmission

With the microphone PTT switch ON, data (call sign, digital code and information) is sent from IC1 (B) to IC2 (B) and from IC2 (B) to IC3 (B). As a result, ST becomes "L" and after about 150m sec., ME IC3 (B) pin 21 becomes "H" (simultaneously microphone amplifier input is cut) and MSK signals of 1.2 kHz and 1.8 kHz are applied to the microphone amplifier, thereby modulating the transmitting carrier.

Reception

When the [D.SQ] key is pressed to on, AC (audio cut) becomes "H". When the collect MSK signal is received, the signal runs through the receiving circuit at (A), and goes to IC3 (B) after being sent from the discrete output (RX terminal) through IC7 (B) active filter. The data (call sign, digital code and information) modulation from IC3 is sent to IC2 (B). The data is further sent from IC2 (B) to IC1 (B) and when the digital codes coincide, AC goes "L" and the squelch opens. If the code alert state is being set then, the beep sounds continuously in addition to the squelch opening.

CIRCUIT DESCRIPTION

Lithium Battery (W09-0323-05)

Specifications

| | |
|------------------------|-----------------------------------|
| Model | CR2032 |
| Nominal Voltage | 3V |
| Nominal capacitor | 170mAh |
| Discharge Stop Voltage | 2.0V |
| Dimensions | Diameter 20.0 mm Height 3.2 mm |
| Weight | 3 g |

Replacement procedure

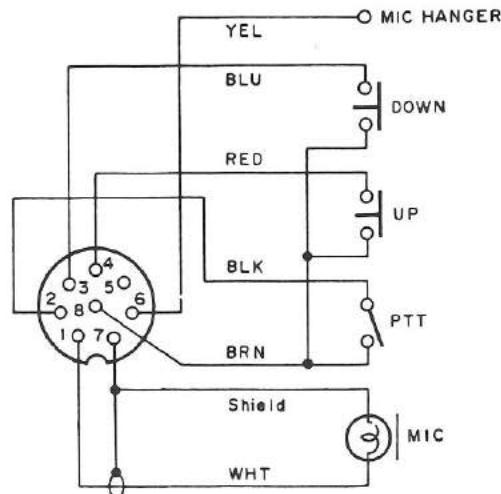

When replace the back-up battery read as follows.

1. Remove the lower case.
2. Take care not to damage parts on the PC board since they are soldered battery.
3. Remount cell again (conform to cell pole)
4. After power switch is on, push the reset switches on.

(T91-0332-05) K type

PARTS LIST

CAPACITORS

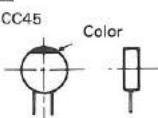

| | | | | | |
|----|----|----|----|-----|---|
| CC | 45 | TH | 1H | 220 | J |
| 1 | 2 | 3 | 4 | 5 | 6 |

1 = Type ceramic, electrolytic, etc.
 2 = Shape round, square, etc.
 3 = Temp coefficient
 4 = Voltage rating
 5 = Value
 6 = Tolerance

Temperature coefficient

| 1st Word | C | L | P | R | S | T | U |
|----------|-------|-----|--------|--------|-------|------|--------|
| Color * | Black | Red | Orange | Yellow | Green | Blue | Violet |
| ppm/°C | 0 | -80 | -150 | -220 | -330 | -470 | -750 |
| 2nd Word | G | H | J | K | L | | |
| ppm/°C | ±30 | ±60 | ±120 | ±250 | ±500 | | |

Example CC45TH = -470 ± 60 ppm/°C

Tolerance

| Code | C | D | G | J | K | M | X | Z | P | No code |
|------|-------|------|----|----|-----|-----|-----|-----|------|------------------------|
| (%) | ±0.25 | ±0.5 | ±2 | ±5 | ±10 | ±20 | +40 | +80 | +100 | More than 10μF-10~+50 |
| | | | | | | | -20 | -20 | -0 | Less than 4.7μF-10~+75 |

Less than 10pF

| Code | B | C | D | F | G |
|------|------|-------|------|----|----|
| (pF) | ±0.1 | ±0.25 | ±0.5 | ±1 | ±2 |

| Abbreviation | | Abbreviation | |
|--------------|--------------|--------------|----------|
| Cap | Capacitor | ML | Mylar |
| C | Ceramic | S | Styren |
| E | Electrolytic | T | Tantalum |
| MC | Mica | | |

Resistors not listed in this parts list are standard, fixed carbon composition 1/4W or 1/8W.
 The resistance values, in ohms, are indicated on the schematic diagram.

Chip capacitor

| | | | | | | | |
|-----|----|----|---|----|----|-----|---|
| ex. | CC | 73 | F | SL | 1H | 000 | J |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| ex. | CK | 73 | F | F | 1H | 000 | Z |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

1 = Type ceramic, electrolytic
 2 = Shape round, square
 73: chip type
 3 = Dimension
 4 = Temp. coefficient
 5 = Voltage rating
 6 = Value
 7 = Tolerance

Chip resistor (Carbon)

| | | | | | | | |
|-----|----|----|---|---|----|-----|---|
| ex. | RD | 73 | E | B | 2B | 000 | J |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

Carbon resistor (Normal type)

| | | | | | | | |
|-----|----|----|---|---|----|-----|---|
| ex. | RD | 14 | B | B | 2C | 000 | J |
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

SEMICONDUCTOR

| Item | Re-marks | Parts No. |

DISASSEMBLY

DISASSEMBLY FOR UPPER CASE

- ① To loosen the side escutcheon's (L & R) screw (black 4 pieces).
- ② Remove upper case's screw (2 pieces).

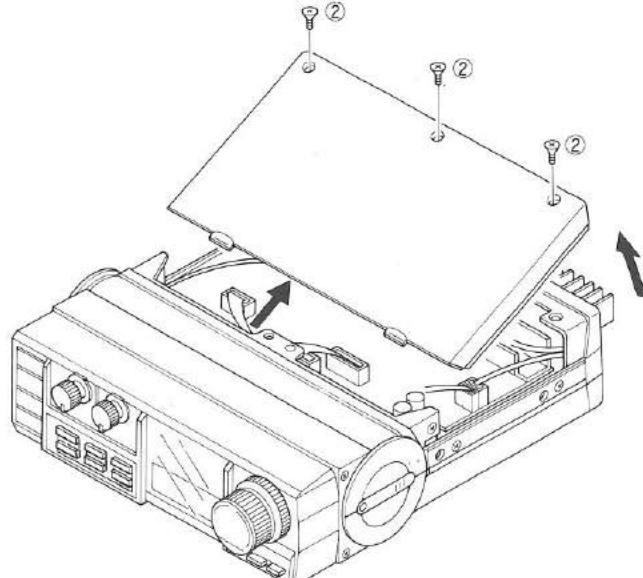

DISASSEMBLY FOR DISPLAY UNIT

- ① Remove main dial by Hex. wrench, remove 11mm nut.
- ② To remove AF, SQ knob from front panel, remove nut by special tool (T-043).
- ③ Remove screw (3 pieces) on the DISPLAY UNIT.

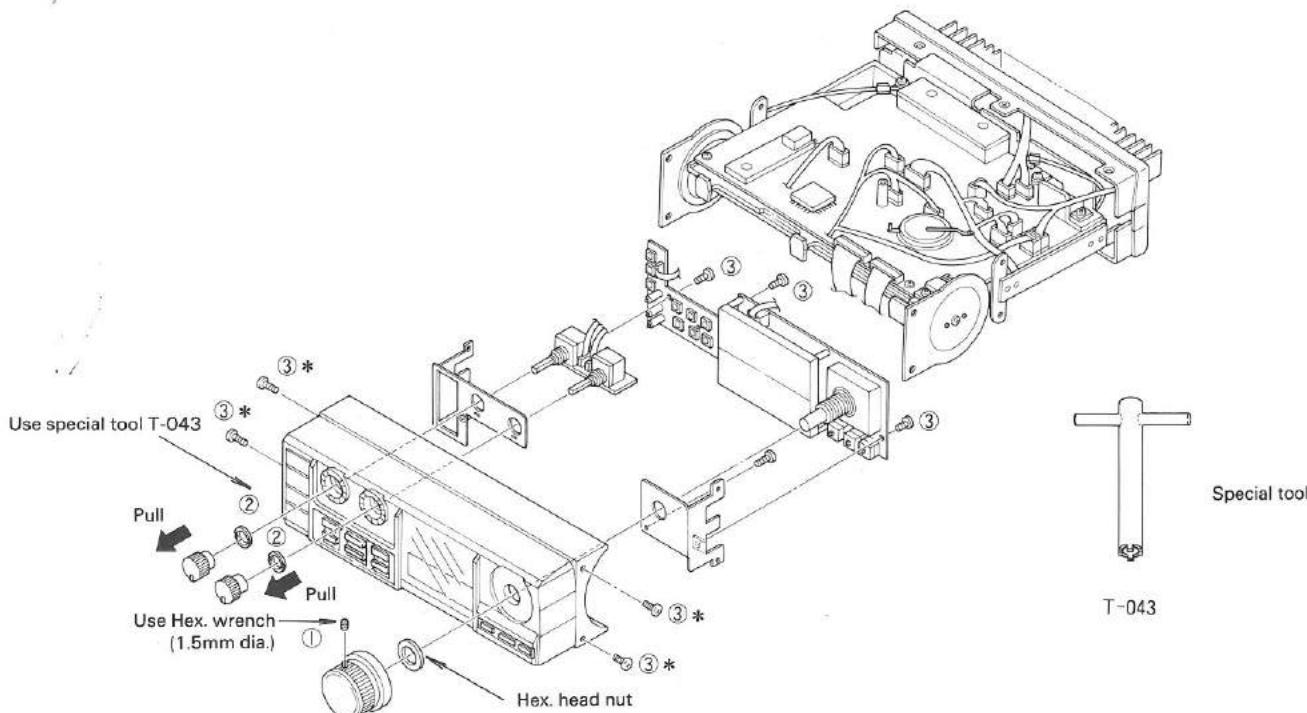

DISASSEMBLY FOR LOWER CASE

- ① To loosen the side escutcheon's (L & R) screw (black 4 pieces).
- ② Remove lower case's screw (3 pieces).

DISASSEMBLY FOR FRONT PANEL

- ① Remove side escutcheon's screw and knobs.
- ② Remove plastic cover's (upper and lower) screw.
- ③ Remove front panel's screw (4 pieces).

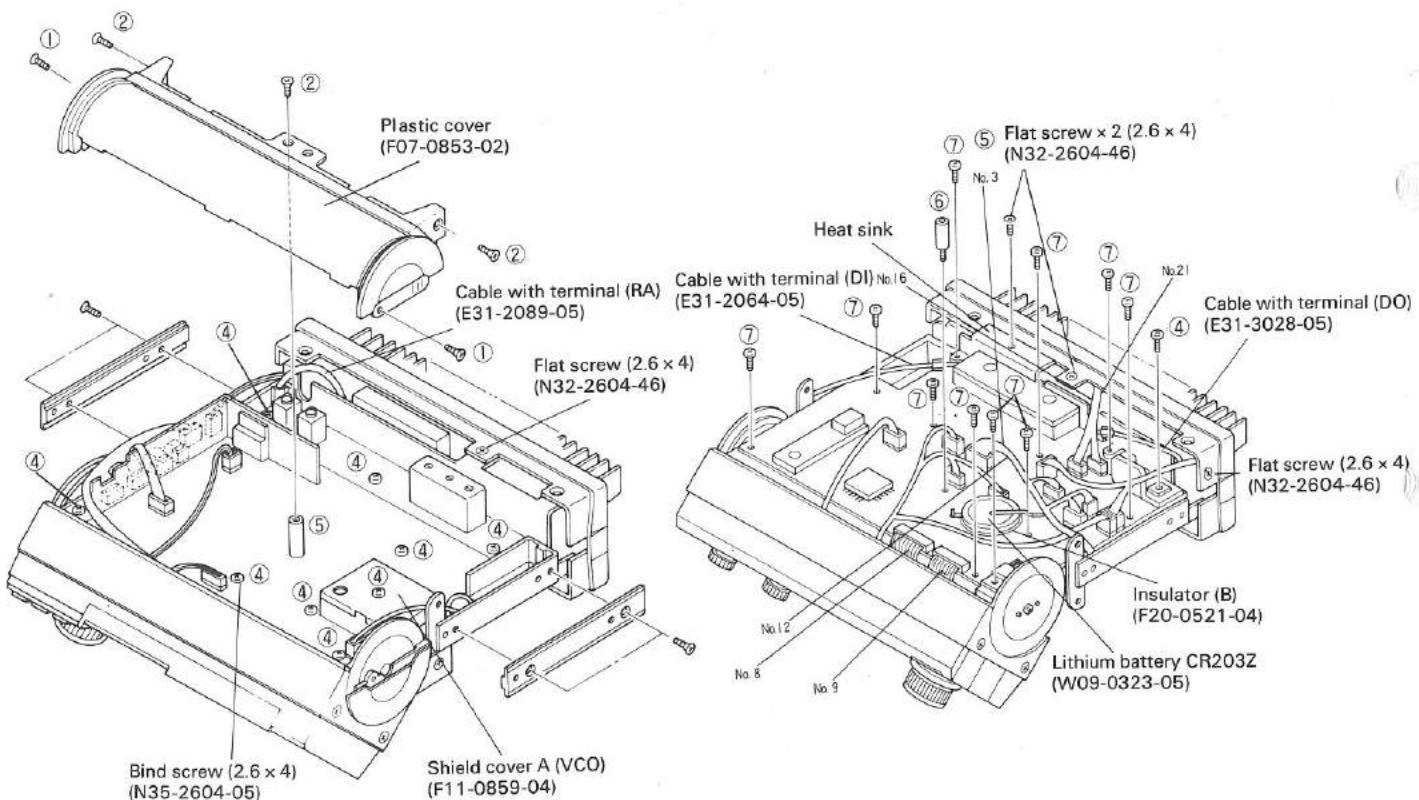

DISASSEMBLY

REMOVING THE "A" UNIT (x44-1590-11)

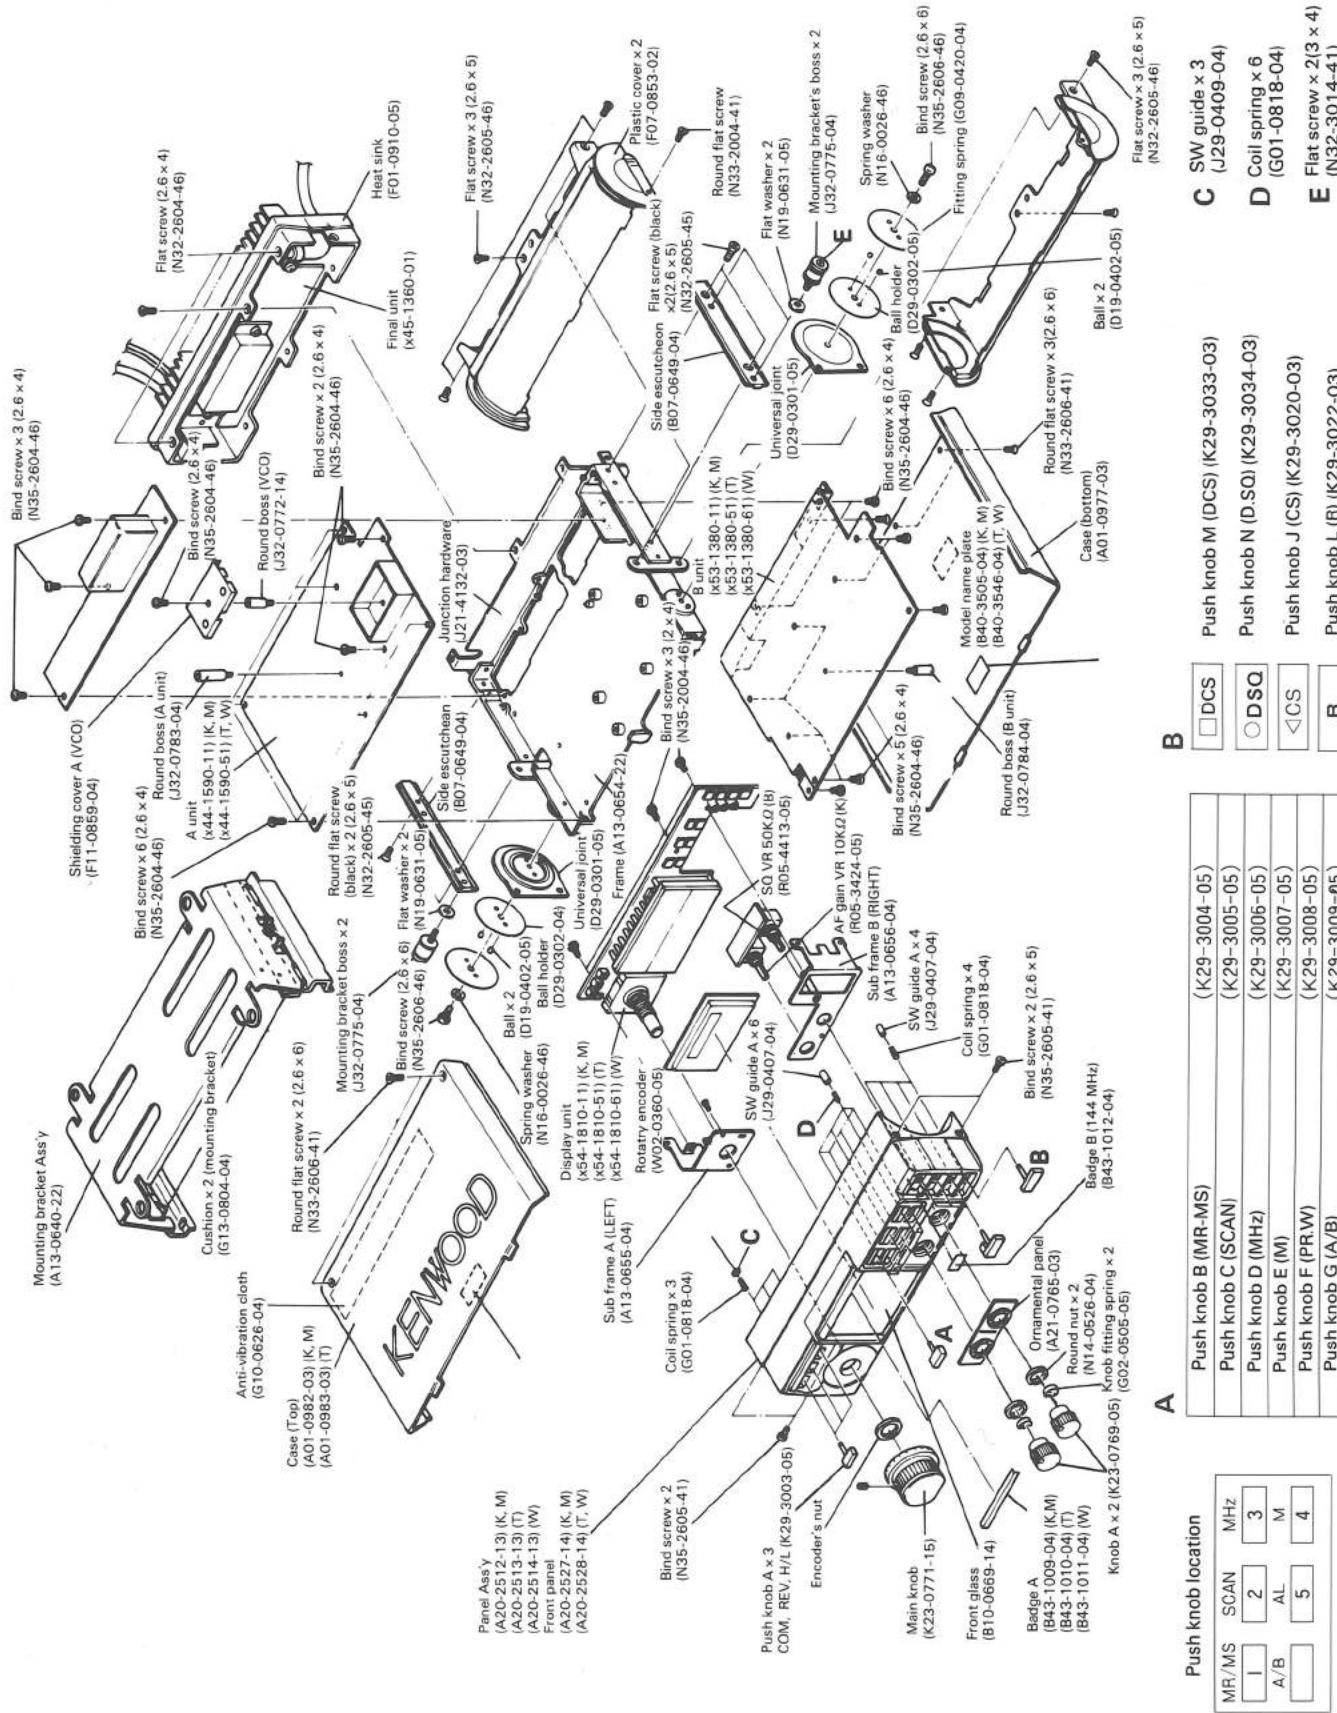

- ① Remove the plastic cover's (F07-0853-02) screw (N33-2004-41) (small screw × 2).
- ② Remove plastic cover's screw (flat screw).
- ③ Incline at a plastic angle of down (show to below).
- ④ Remove "A" PC board's screw (12 pieces).
- ⑤ Remove 2 round boss (one of boss is located in VCO case).
- ⑥ Remove connector and coaxial cable (RA, DI) at final unit.

REMOVING THE "B" UNIT (P x53-1380-11)

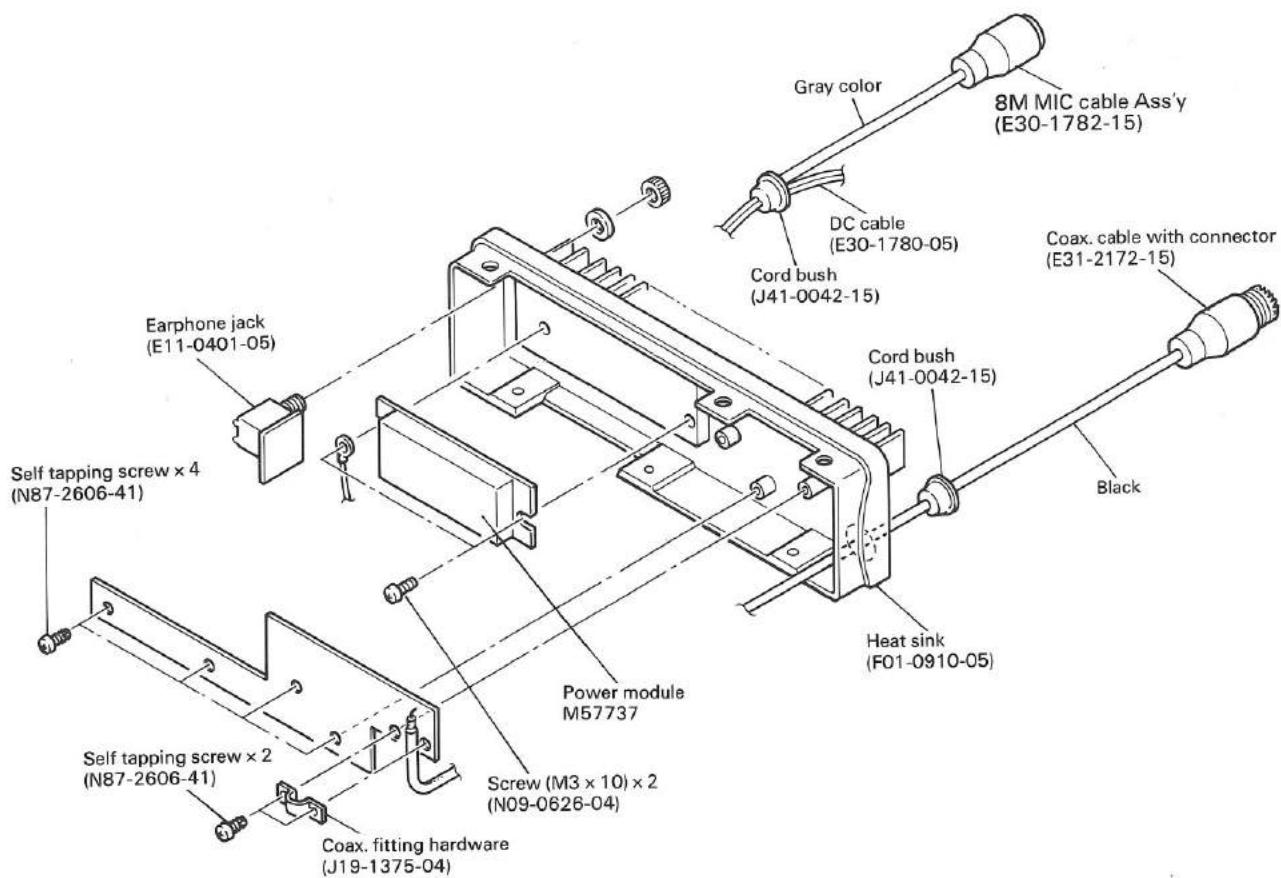

- ① Remove the plastic cover's (F07-0853-02) screw (N33-2004-41) (small screw × 2).
- ② Remove plastic cover's screw (flat screw).
- ③ Incline at a plastic angle of down (show to below).
- ④ Remove Q3 TR's screw.
- ⑤ Remove heat sink's screw.
- ⑥ Remove round boss.
- ⑦ Remove "B" PC board's screw (10 pieces).
- ⑧ Remove connector and coaxial cable (DI, DO etc.).

PACKING

★

Protective bag D
(H25-0116-04)

Cable fitting hardware (J19-1402-04)

① Protective bag ④

Hex. head nut (N10-2040-41)

Screw (4 x 10) x 2 (N10-2040-41)

Self tapping screw (4 x 8) x 4 (N87-4008-41)

Flat tapping screw (4 x 8) x 2 (N88-4008-41)

② Protective bag ④ (H25-0029-04)

Screw (mounting bracket) x 4 (N09-0632-05)

Self tapping screw (mounting bracket) x 4 (N09-0632-05)

Flange nut C (mounting bracket) x 4 (N14-0510-04)

Flat washer C (mounting bracket) x 4 (N15-1050-46)

Flat washer C (mounting bracket) x 4 (N15-1060-46)

Spring washer (mounting bracket) x 4 (N16-0060-46)

Bind tapping screw (cable fitting hardware) x 2 (N89-2606-45)

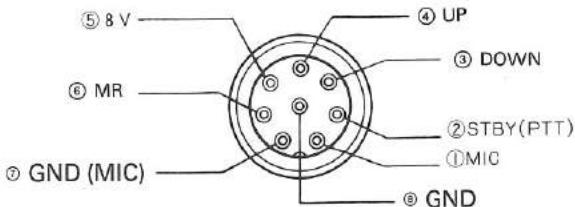

ADJUSTMENT

PREPARATION

Unless otherwise specified.
Set the control as follows.

| | |
|--------------------|-----|
| POWER SW | ON |
| VOL (AFGAIN) | MIN |
| SQL VOL | MIN |
| HI/LOW SW | HI |
| COM SW | OFF |
| REV | OFF |
| OFF SET | S |

- When adjusting the trimmer or coils, use a non-induced adjusting rod of bakelite, etc.
- When adjusting the RX Section never transmit to prevent SSG damage.
- The output level of SSG is indicated as SSG "S" open circuit.
- Connect MIC connector as shown in bellow.

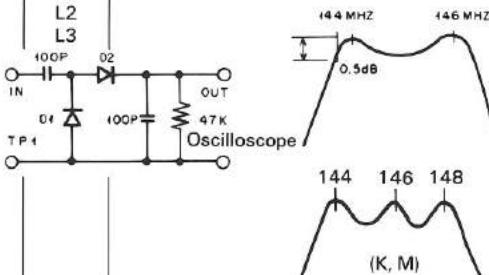

MIC terminal (view from 8P MIC cable)

RX ADJUSTMENT

| Item | Condition | Measurement | | | Adjustment | | | Specifications |
|-------------------|--|----------------|---|-----------------------|--------------------------|------------|---|---|
| | | Test equipment | Unit | Terminal | Unit | Part | Method | |
| 1. Reset | Reset switch S1 push on (B unit) | DISPLAY | | | | | Check | 5.000A (T, W) 6.000A (K, M) Tone sounds |
| 2. Voltage check. | 1) DC POWER SUPPLY: 13.8V POWER SW: ON (Receive) | A | 8C | | Connector No. 5 (1 pin) | | 7.7V ~ 8.3V | |
| | | | 8R | | JP-2 Jumper lead* | | 7.6 ~ 8.2V | |

| | 2) COM SW : OFF | Tone sounds 5.000A displayed |
| 5. Memory write | 1) M knob is depressed make a continuous beep sound. MR/M斯 SCAN MHz 1 2 3 A/B PRW M 4 5 6 1 ~ 3 knob is depressed during beep sounds. | Tone sounds Memory wrote already. < ex > 5.000 CH1 Memory write 5.100 CH2 Memory write 5.200 CH3 Memory write |
| 6. Memory check | 1) MR/M斯 : ON 1 | Tone sounds 5.000 1 displayed |
| | 2) SCAN : ON 2 | Tone sounds 5.100 2 displayed |
| | 3) MHz : ON 3 | Tone sounds 5.200 3 displayed |
| 7. SCAN | 1) Connect the SSG to ANT connector f = 145.300 MHz MOD: 1 kHz DEV: 5 kHz SCAN : ON 2 SQ: MAX. | Tone sounds MHz dot is flashed Scan will start increase by 25 kHz (T, W) and 5 kHz (K, M). Then scan stopped (freq. 5.300) |
| | 2) SQ: 0 | After about 6 seconds, scan will start again. |
| | 3) MIC PTT: 1 push | Scan operation stopped |
| 8. OFFSET | 1) Turn to main dial then set freq 5.100A | 5.100A displayed |
| | 2) OFFSET SW: (-) (+) Transmitt | ON AIR LED's light. 4.500A displayed OFFSET (-) 5.700A displayed OFFSET (+) |
| | 3) REV SW: ON | 5.100A displayed |
| | 4) Return to RX OFFSET SW: (S) | |
| 9. MHz | 1) MHz : ON 3 | Tone sounds MHz digit increases by 1 MHz ex. 4.100 → 5.100 |
| 10. Memory scan | 1) MR/M斯 : depressed over 1 second | 1) Decimal point is flashed memory scan will start between ex. M1 → M2 → M3 → M1 5.000 → 5.100 → 5.200 → 5.000 |
| 11. PR.W (Priority-watch) | 1) PRW : ON 4 SQ VOL: MIN | Tones sounds PRW LED's light. Busy LED's light. After 6 seconds, 5.100 displayed. (2 seconds hold) |
| | 2) PRW : ON again 4 | PRW LED's OFF. |

DCS FUNCTION
OPERATIONAL CHECKS

| Item | Condition | Check of movement |
|--|---|--|
| 1. Digital cord setting (Digital cord will program 5.) | 1) Freq. 5.000 LOW SW: ON CS (Front panel):ON (push) | Tone sounds 00000 displayed CS LED's light |
| | 2) Digital cord setting 1 2 3 5 4 If push 1 ~ 5 knob, display will change numbers (0 ~ 9). | ex. Incase of digital cord 1 push 1 time 2 push 2 time 3 push 3 time 4 push 4 time 5 push 5 time Also, tone sounds if push each times. |
| | 3) Another digital cord setting OC.SQ : ON | Tone sounds 00000 displayed again Then repeat item (2) again. 5 kind of digital cord wrote already |
| 2. Call sign setting | 1) Freq. 5.000 CS : ON | Tone sounds 1 2 3 4 5 displayed |
| | 2) R : ON | Tone sounds 1 0 0 displayed 1st digit 3rd digit 4th digit then, set a number of ASCII cord (call sign) (See a service manual page 9) |
| | 3) C.SQ : ON | Tone sounds 2 0 0 displayed Call sign will make a 6 digit. |
| | 4) R : ON | Tone sounds 5.000 displayed |
| 3. Digital card Squelch operation | 1) Freq. 4.900 DCS : ON AF GAIN VR: Centered *Also monitor radio's condition Freq. 4.9000 DCS : ON | Tone sounds □ DCS LED's light Noise heard from speaker. |
| | 2) DSQ : ON | Tone sounds Noise stopped. |
| | 3) <Monitor radio condition> MIC PTT: 1 push | DSQ LED's OFF Noise heard from speaker. C. AL LED's light. |
| | 4) R : ON | Tone sounds CALL LED's OFF |
| | 5) DSQ : ON R : ON | Tone sounds DSQ LED's light. R LED's light Noise stopped |
| | 6) <Monitor radio condition> MIC PTT: 1 push | Tone sounds DSQ LED's OFF. CALL LED's light Noise heard from speaker and piping sound (continuous sounds) |
| | 7) R : ON | Tone sounds piping sound stopped. CALL LED's OFF |
| | 8) <Monitor radio condition> DSQ : ON | <Monitor radio condition> DSQ LED's light |
| | 9) MIC PTT: 1 push | <Monitor radio condition> DSQ LED's OFF Noise heard from speaker |

A UNIT (view from top case side)

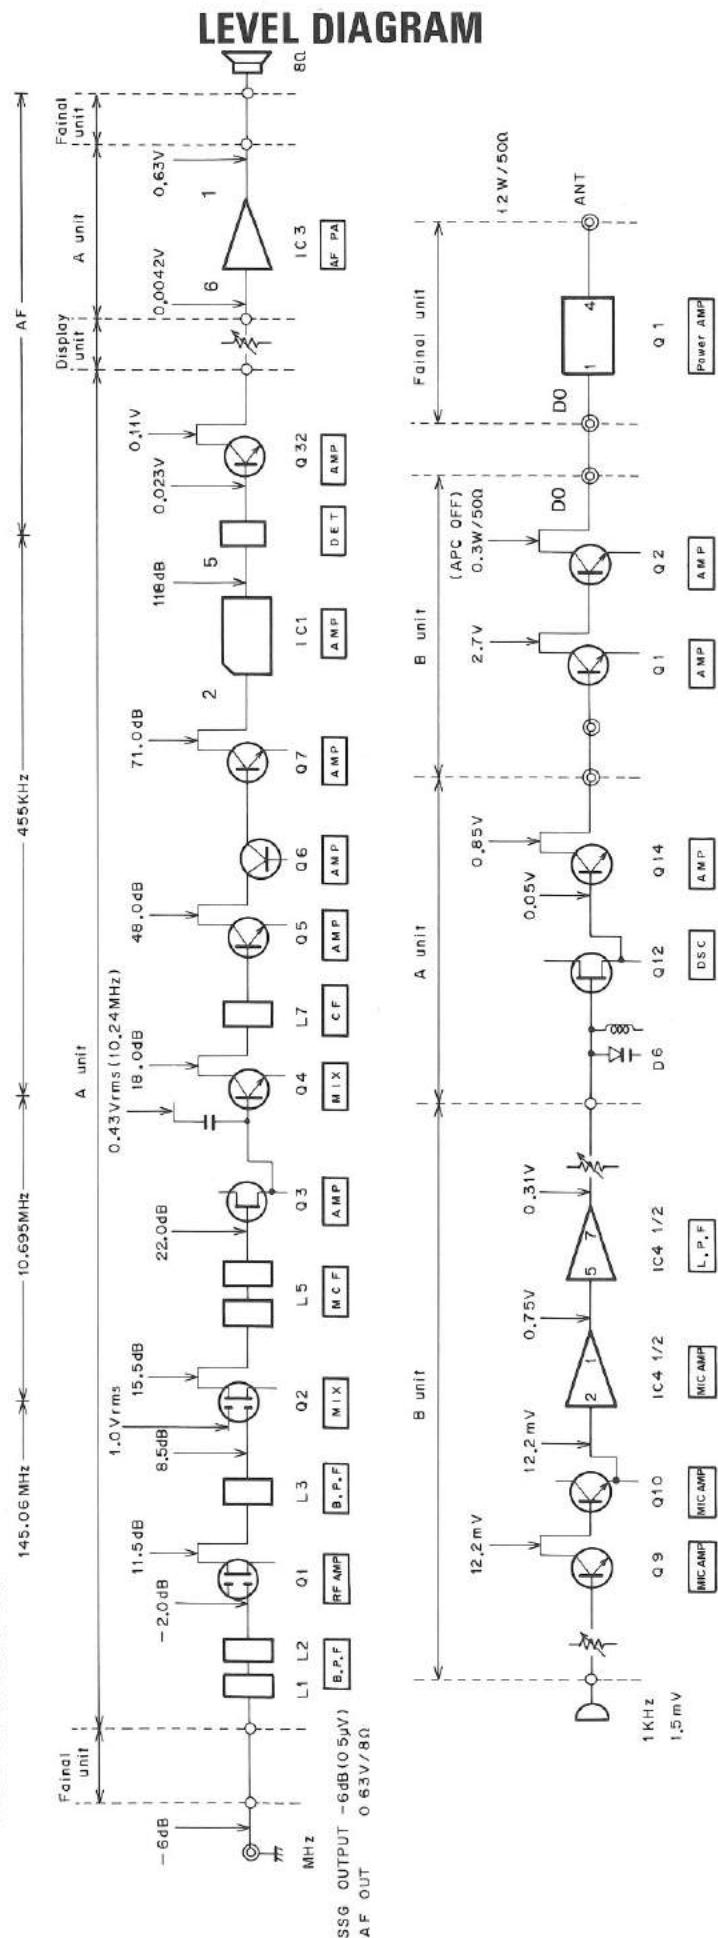

BOTTOM VIEW

B UNIT (view from bottom case side)

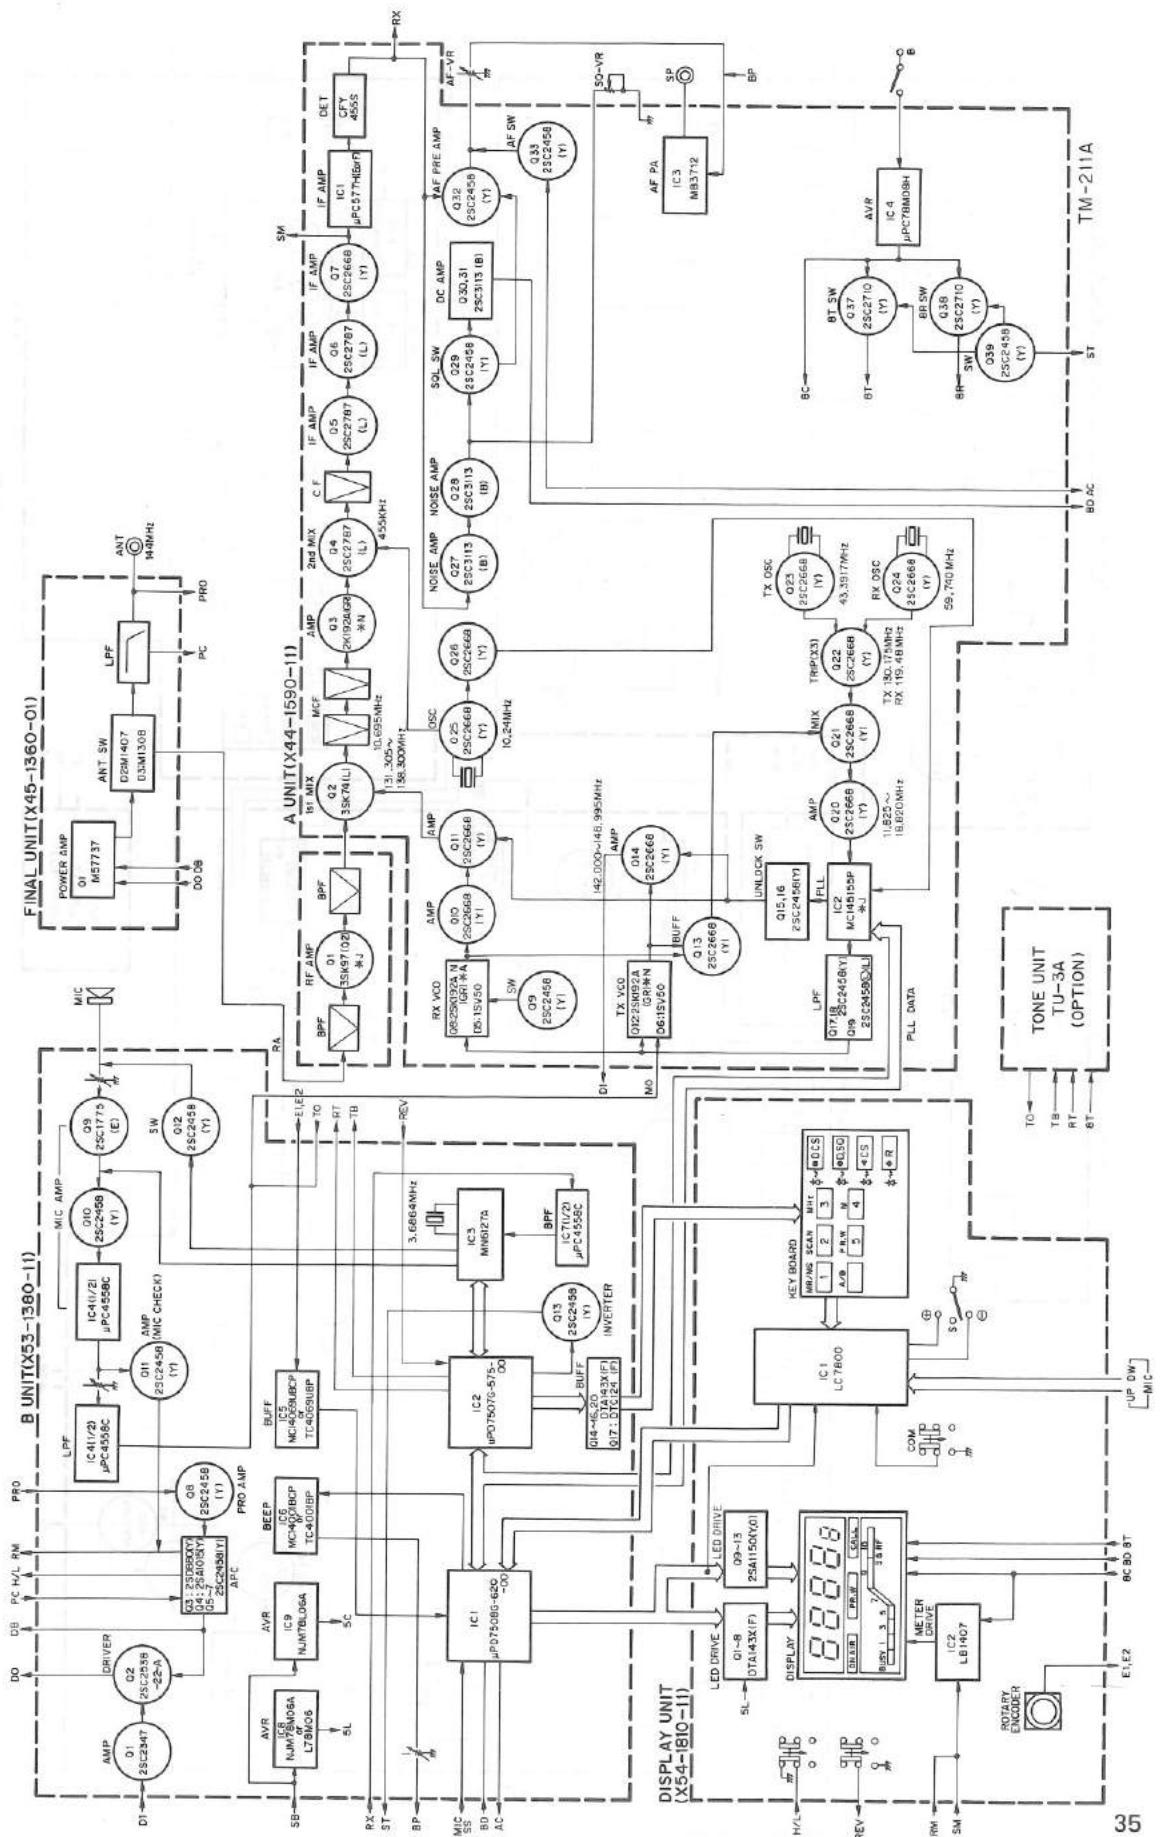

Note:

1. In measuring the circuit from the ANT terminal to the spin of IC1 an unmodulated signal of 145.06 MHz, -6 dB μ from an SSG was applied to the ANT terminal to obtain a reference NQ sensitivity. Then, the SSG output was measured when the NQ sensitivity at each SSG signal input point became equal to the reference NQ sensitivity. The SSG output was measured through a 0.01 μ F capacitor.
2. In measuring the circuit from the base of Q32 to the SP terminal, an SSG signal of 145.06 MHz, -6 dB μ , 1 kHz MOD, 5 kHz DEV was applied to the ANT terminal and the AF VR was adjusted to obtain an AF output of 0.63V/8 Ω . The signal voltage at each point was measured with an audio V.V.

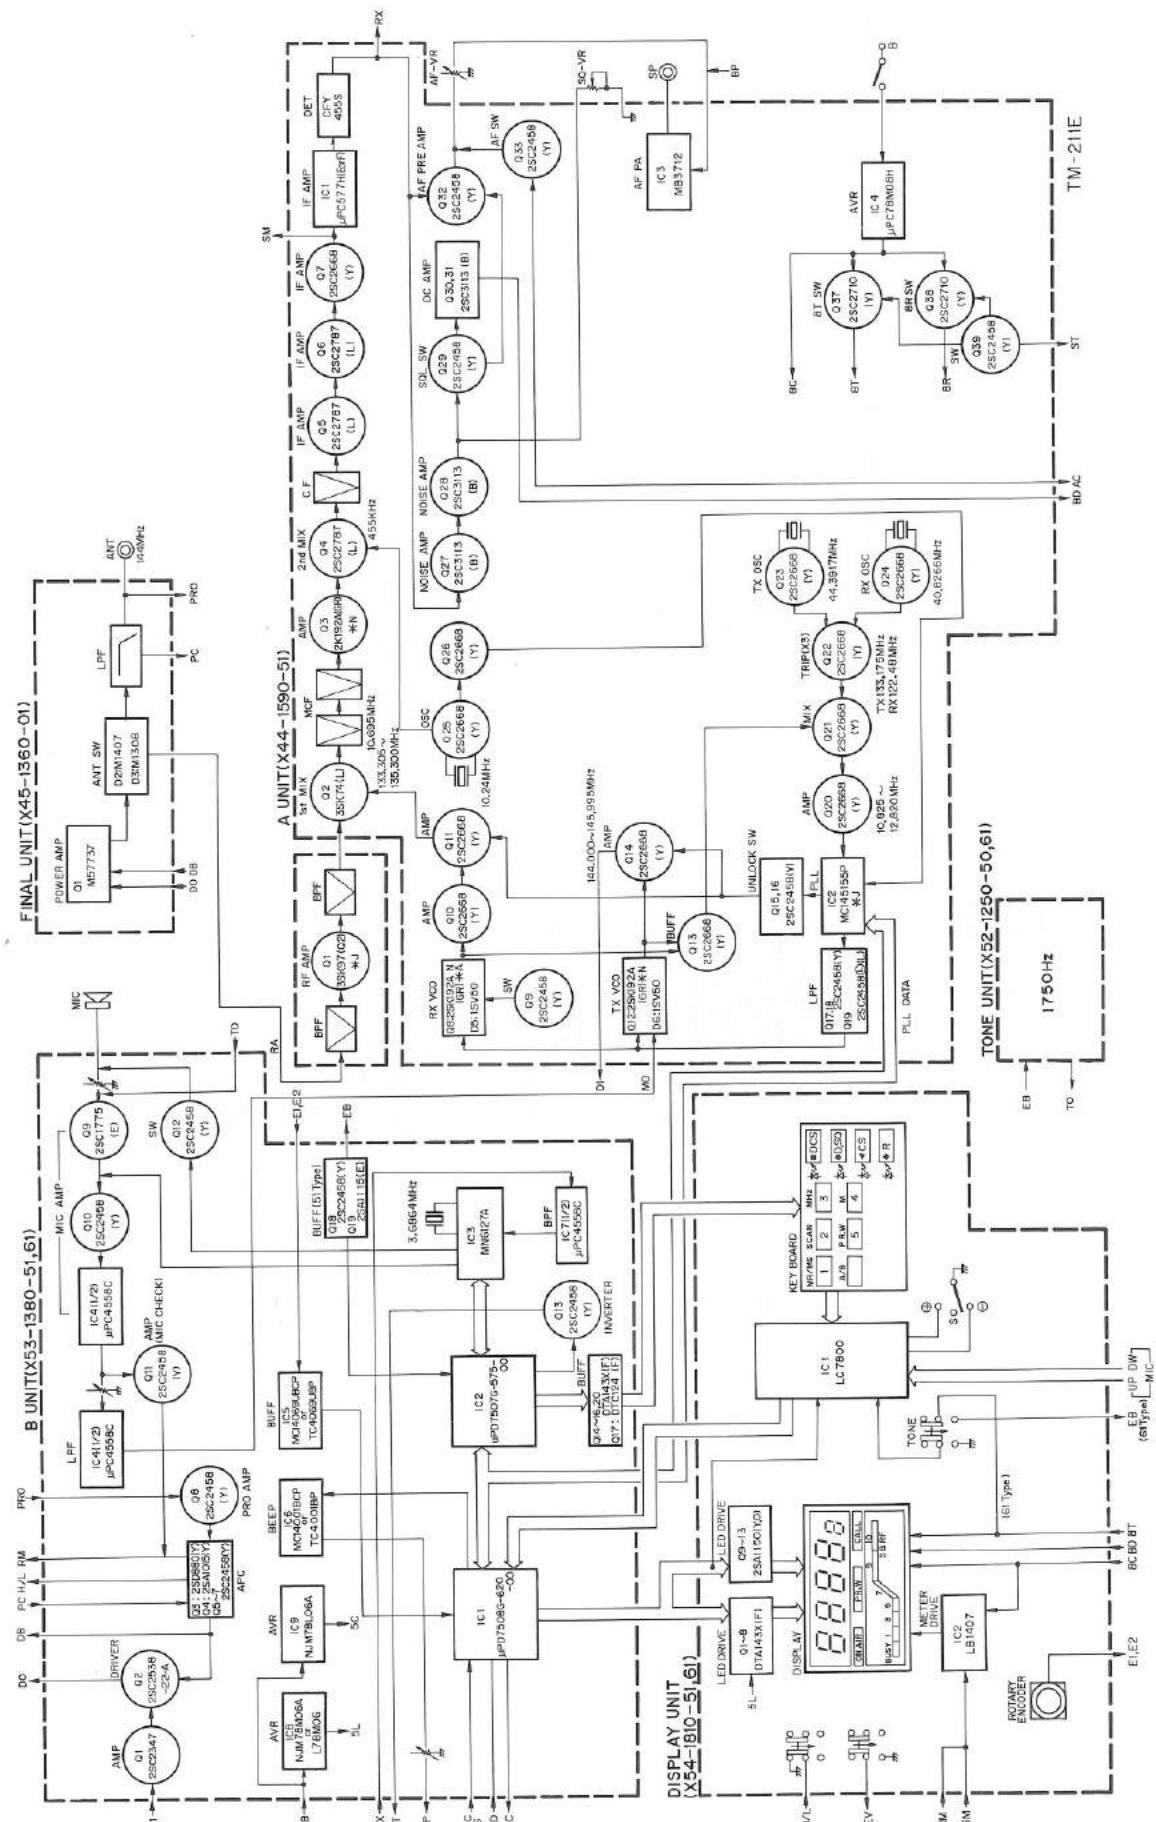

**Note:**

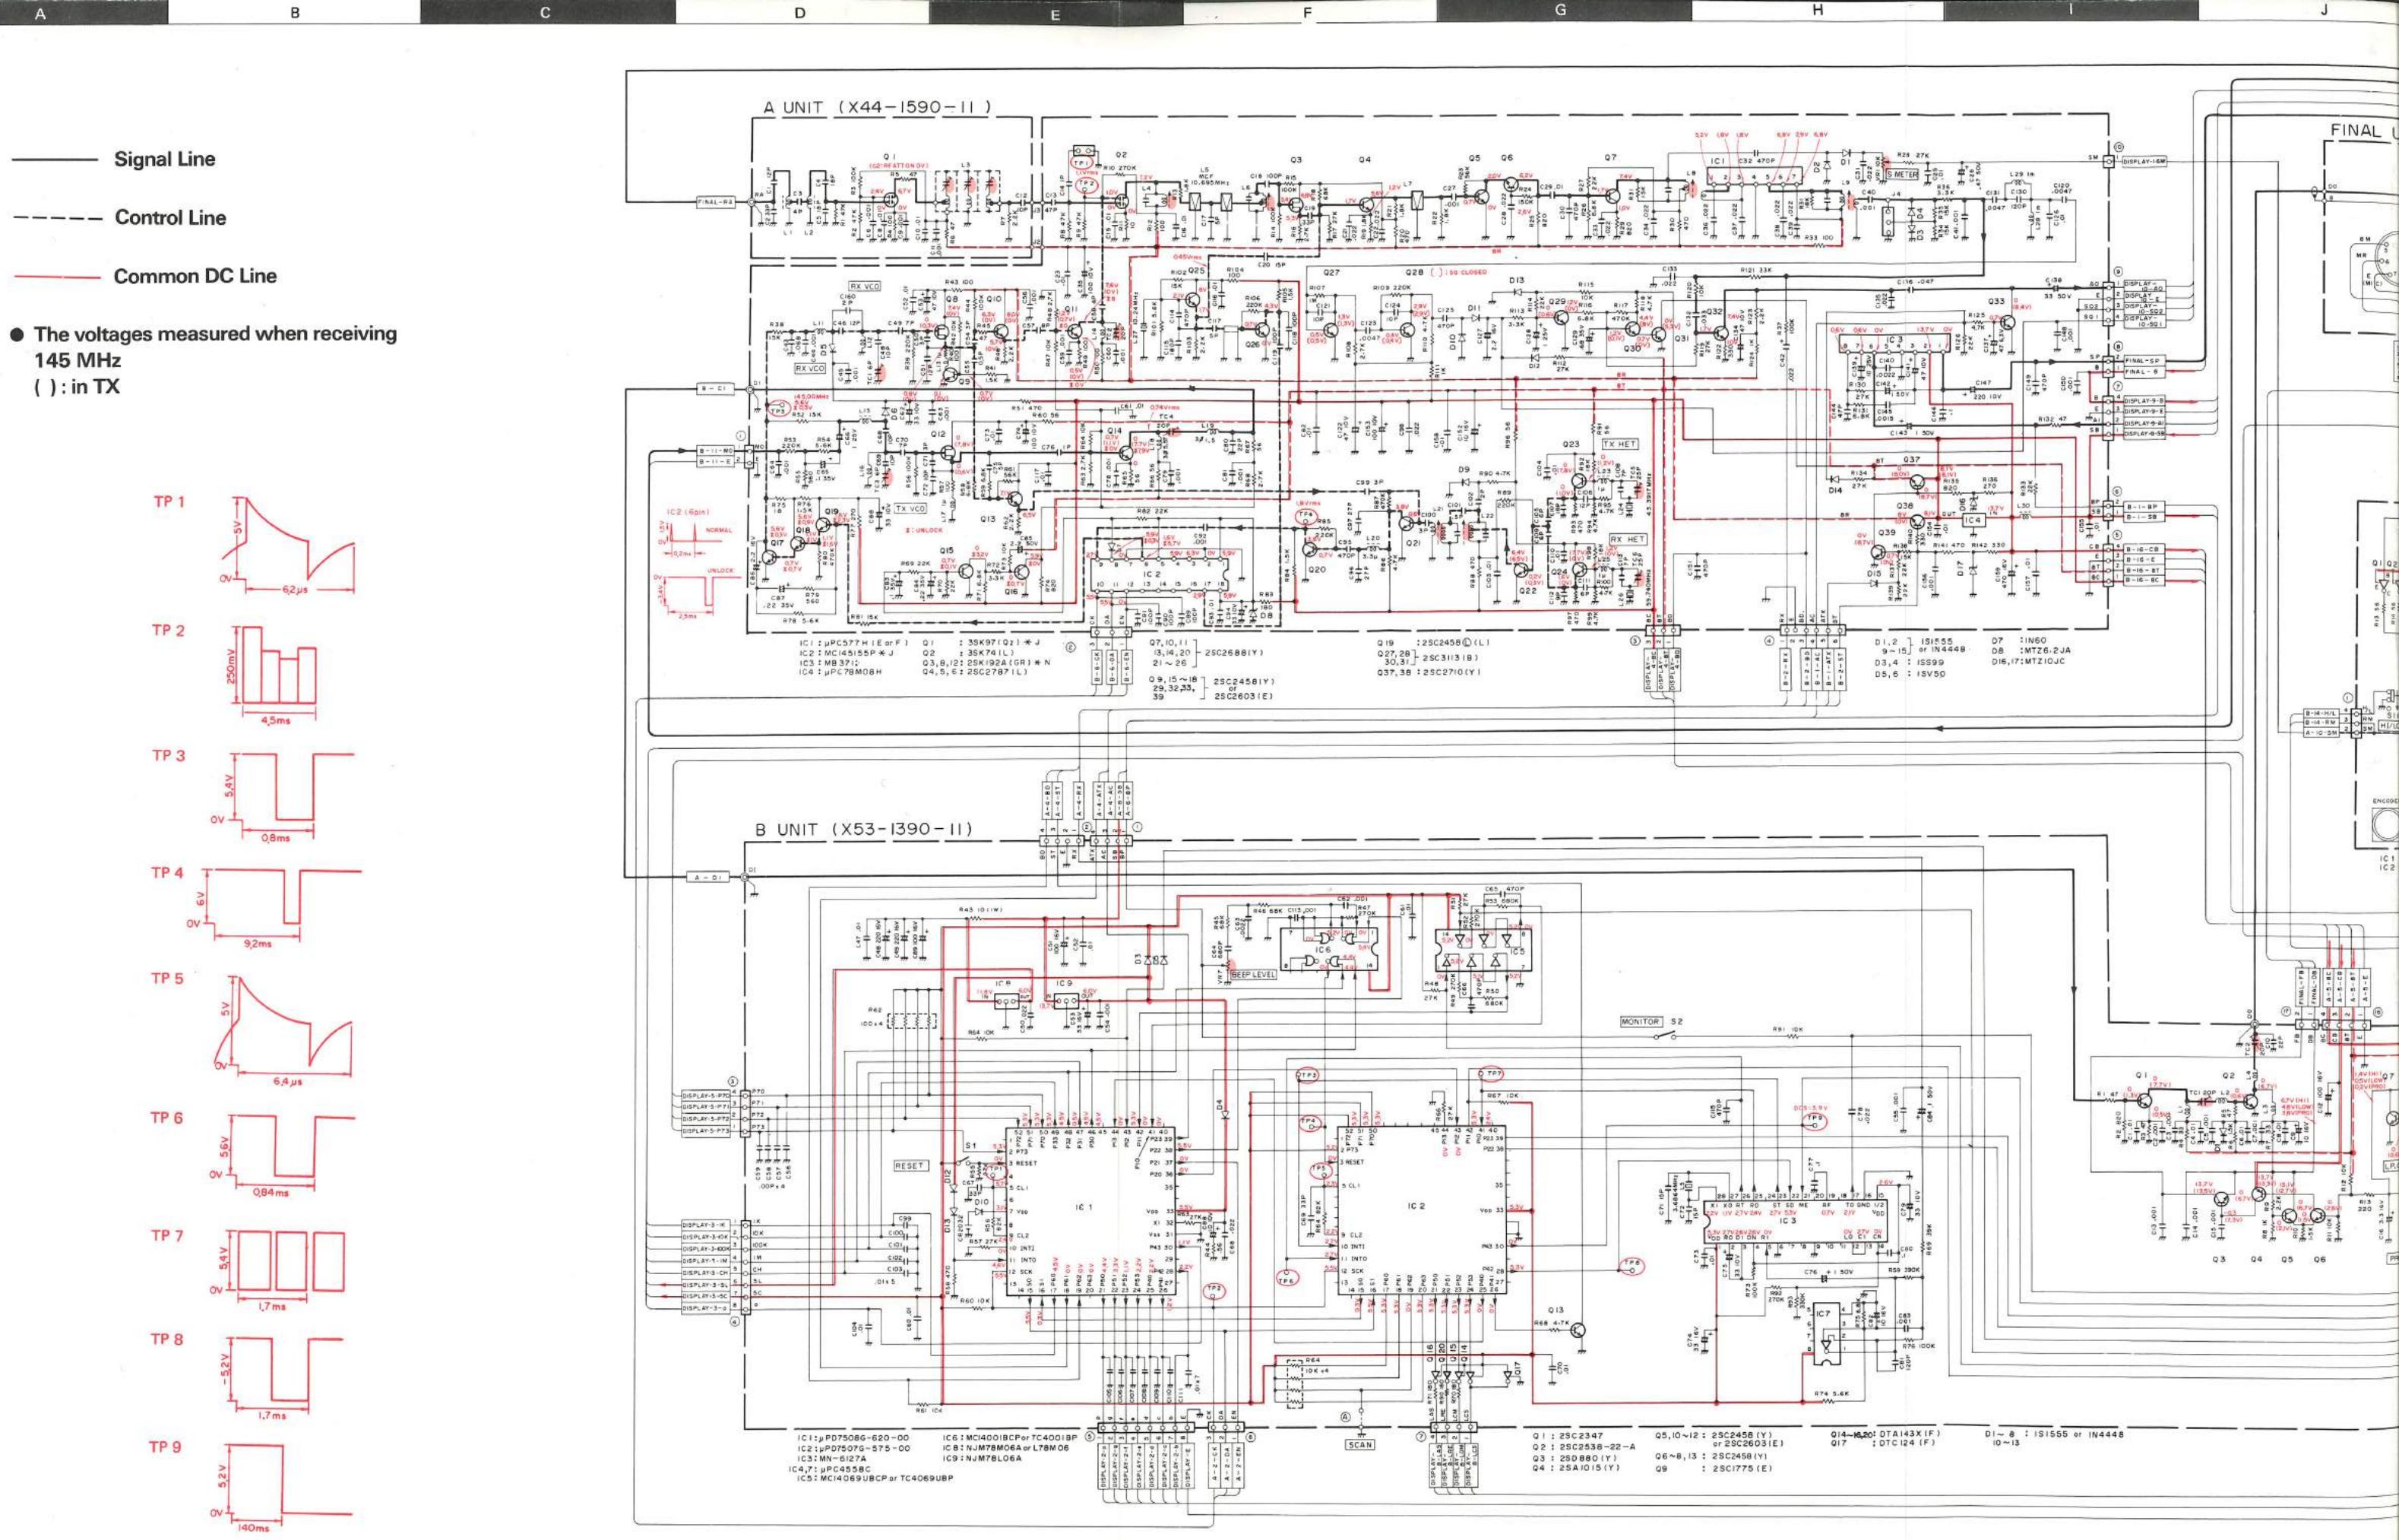

1. The signal level before DO was measured with the coaxial cable disconnected from DO and the final unit. The signal level after the DO terminal was the level under normal operating conditions.
2. The B unit (Q9 ~ IC4) was measured using audio V.V. and A unit (Q12 ~ Q14), B unit (Q1 ~ Q2) was measured using an RF V.V. (1/100 attenuator used for levels of more than 3V).

Tone Frequency Table

SPECIFICATIONS

[General]

| | |
|----------------------------------|--|
| Frequency range | 144.000 to 147.995 MHz (TM-211A) 144.000 to 145.995 MHz (TM-211E) |
| Mode | FM F3, F2 (Control signal for DCS system) |
| Anntenna impedance | 50 ohms |
| Power requirement..... | 13.8V DC \pm 15% |
| Grounding | Negative |
| Operating temperature | -20°C to +60°C (-4°F to +140°F) |
| External speaker impedance | 8 ohms |
| Current drain | 0.5 A in receive mode with no input signal Max. 5.6 A in HI transmit mode 2.5 A in LOW transmit mode (Approx.) |
| Dimensions..... | 140 mm wide 40 mm high 197 mm deep (projections not included) |
| Weight..... | 1.25 kg (2.75 lbs) |

[Transmitter]

| | |
|---|--|
| RF output power (at 13.8V DC, 50Ω load) | HI 25 Watts min. Low 5 Watts approx. (adjustable up to about 15 W) TX duty cycle: 1 minute ON 3 minutes OFF RX duty cycle: Continuous (100%) |
| Modulation..... | Reactance |
| Frequency tolerance (-10°C ~ +60°C)..... | Less than $\pm 15 \times 10^{-6}$ |
| Spurious radiation..... | HI Less than -70 dB LOW Less than -60 dB |
| Maximum frequency deviation (FM) | ± 5 kHz |
| Audio distortion (at 60% modulation) | 3% max. (300 Hz ~ 3000 Hz) |

[Receiver]

| | |
|------------------------------|---|
| Circuitry | Double superheterodyne |
| Intermediate frequency | 1st 10.695 MHz 2nd 455 kHz |
| Receiver sensitivity | SINAD 12 dB less than 0.18 μ V S + N/N more than 50 dB at 1.0 mV input |
| Receiver selectivity | More than 12 kHz (-6 dB) Less than 24 kHz (-60 dB) |
| Spurious response | Better than 70 dB (except fd-IF/2) |
| Squelch sensitivity..... | Less than 0.15 μ V (threshold) |
| Auto scan stop level | Less than 0.18 μ V (threshold) |
| Audio output..... | More than 2.0 watts across 8 ohms load (5% dist.) |

[Auto patch microphone (MC-48) supplied] – For U.S.A. version only

| | |
|-----------------|----------|
| Impedance | 500 ohms |
|-----------------|----------|

[DCS control]

| | |
|---|--|
| Code | NRZ equal-length code |
| Modulation..... | MSK modulation |
| Frequency deviation | ± 2.5 kHz or more ± 5 kHz or less ± 3.5 kHz standard |
| Mark frequency and deviation | 1200 Hz \pm 200 PPM |
| Space frequency and deviation..... | 1800 Hz \pm 200 PPM |
| Code transmission speed and deviation | 1200 bits/second \pm 200 PPM |

Note: Circuit and ratings are subject to change without notice due to developments in technology.
