## OPTIONS

B18 5-Watt External Speaker
B20 Telephone Interconnect (DTMF Full Size Mic).
B22 Compact Mic with Clip (omits Desk Mic)
B32 Omit Power Supply
B70 Omit Antenna Altogether
B71 Omit Microphone
B81 Key Lock Mount
B87 Omit External Speaker
B90 Omit All Accessories Except Microphone
B109 Handset with Hang-up Cup
B113 Ignition Switch Cable
B161 Omit Power Cable
B239 Noise Canceling Microphone
B291 Floor Mount
B329 4 W RF Power
B382 Full Size Palm Nicrophone
B392 Compact Mic with long cord
B470 Emergency Alarm Foot Switch
B561 Quick Call II
B663 Extra Stability Mount (12 W model only)
B665 Control Station
B674 External Alarm Relay/Cable/Switch Kit
B688 Emergency Alarm Push Button
B700 Public Address with Internal/External Speaker and A/B Receive Audio Switch. (Includes two 6 W external power amplified speakers, one 5 W external audio receive speaker, and a control switch panel.)
B835 MDC-1200
B946 Telephone Interconnect Receive Only

## PERFORMANCE SPECIFICATIONS

## GENERAL

| Model series | MaxTrac 100 <br> D27MJA73A5AK (PL/DPL/CSQ), <br> 2 frequencies <br> D27MJA73A6AK (PL/DPL/CSQ) with Talk- <br> Around (TA), 2 frequencies <br> MaxTrac 300 <br> D27MJA77A4AK (PL/DPL/CSQ) with TA, <br> 6 frequencies <br> D27MJA7DA6AK (PL/DPL/CSQ), scan with TA, 16 frequencies |
| :---: | :---: |
| No. of frequencies | Up to 16 |
| Frequencies |  |
| Dimensions | 2x7x7.75 ${ }^{\text {n }}$ ( $50.8 \times 178 \times 198 \mathrm{~mm}$ ) |
| Weight | $61 \mathrm{oz}.(1.73 \mathrm{~kg})$ |
| Typical RF output (into 50 ohm load @ 13.6 V ) | 12 W |
| Maximum current drain | Receive (5 W): 1.5 A <br> Transmit: 6.5 A <br> Standby : 500 mA |
| FCC Designation | ABZ 89 FT 5728 |
| Metering | All adjustments and alignments are performed electronically using an IBM personal computer, a Radio Interface Box (RIB) and field maintenance software. |
| Operation | 12 V dc negative ground |
| TRANSMITTER |  |
| Output impedance | 50 ohms |
| Spurious and harmonics | 55 dB below carrier (for EIA Spec RS 152B) |

| Frequency stability | $\pm 0.00015 \%$. |
| :---: | :---: |
| Modulation | 10K0F1D, 11K0F2D, 11K0F3E |
| Maximum frequency separation | 6 MHz within each of two groups, 896-902 and $935-941 \mathrm{MHz}$ |
| Audio distortion | 5\% measured per EIA |
| Audio frequency response | +1 to -3 dB from 6 dB per octave preemphasis characteristic from 300 to 3000 Hz |
| Modulation sensitivity | 50-130 mV rms for $60 \%$ maximum deviation at 1000 Hz |
| RECEIVER |  |
| Channel spacing | 12.5 kHz |
| Sensitivity 12 dB SINAD | 0.40 uV |
| Selectivity (EIA SINAD) | 65 dB |
| Intermodulation (EIA SINAD). | 65 dB |
| Spurious and image rejection | 70 dB |
| Input impedance | 50 ohms |
| Audio output | 3 W @ less than $5 \%$ distortion |
| Maximum frequency separation | 6 MHz |
| Frequency stability | $\pm 0.00015 \%$ |
| OPTIONAL SPEAKER ACCESSORY |  |
| Speaker impedance | 2 ohms |
| Audio output | 5 watts |
| Dimensions | $5 \times 5 \times 2.5^{\prime \prime} \quad(127 \times 127 \times 63 \mathrm{~mm})$, excluding mounting bracket |

## 1. RADIO DISASSEMBLY AND ASSEMBLY

### 1.1 TO REMOVE CONTROL HEAD AND

 CHASSIS COVERS(1) Remove control head mounting screws (Figure 1). Pull control head off and away from the radio.
(2) Remove the two chassis cover screws from each side (Figure 1). Remove top and bottom covers from chassis.

### 1.2 TO REMOVE RF CHASSIS SHIELD

Remove RF chassis shield by prying each of the four corners at the indentation provided (Figure 2). Be careful not to overbend any one corner.

Figure 1

69A02978G29-0

Figure 2
1.3 TO REMOVE THE POWER AMPLIFIER HEAT SINK
(1) Disconnect the transmit and receive coaxial cables from the RF board (Figure 3).
(2) Disconnect the 5-pin connector from the logic board (Figure 4 ).
(3) Remove the heat sink mounting screws (Figure 4). Pull heat sink off of chassis while carefully feeding the transmit and receive coax cables through their respective holes in the chassis.
1.4 TO REMOVE THE RF CIRCUIT BOARD
(1) After the PA heat sink has been removed, pry off the RF shield (Figure 5). Be careful not to overbend any one corner or side.
(2) After removing the $R F$ shield, remove all the $R F$ board mounting screws and take out the RF board (Figure 5).

### 1.5 TO REMOVE THE LOGIC CIRCUIT BOARD

(1) After the RF board has been removed, turn the radio over and pry

69A02978a30-0
off the logic shield (Figure 6), again being careful not to bend any one corner or side.
(2) Remove all logic board mounting screws (Figure 6).
(3) Now remove the two regulator heat sink mounting screws from the side of the chassis (Figure 6). The logic board can now be lifted out of the chassis.

### 1.6 TO REMOVE THE POWER AMPLIFIER CIRCUIT BOARD

(1) Remove the power amplifier shield by carefully prying each corner and side until you can slide the shield off easily (Figure 7). Remove the shield completely by guiding the coaxial cables out.
(2) Unsolder the power connector feedthrough leads (Figure 8).
(3) Remove antenna connector lock washer (Figure 8).
(4) Remove two power device mounting screws and all PA board mounting screws (Figure 8), and then take out the PA board.

69A02978a31-0

Figure 4

Figure 5
5

Figure 6

69A02978G34-O

Figure 7
Figure 8

Reverse the disassembly procedure and tighten all screws to the torques specified in Table 1.

## 2. ALIGNMENT

The advanced design and manufacturing procedures eliminate the need for traditional tuning tasks.

All the circuits in the MaxTrac Radios have been aligned at the factory with specialized equipment.

Alignment should only be attempted in a qualified service shop.

### 2.1 PROGRAMMING

The MaxTrac radios can be programmed in the field to these parameters:

- Receive and Transmit Frequencies
- Transmit Frequency Adjustment (warp)
- PL or DPL Encode and Decode Codes
- Transmit Power Output
- Transmit Deviation
- Time Out Timer
- Mode Slave Scan List

Table 1. Fasteners, Tools and Torques

To adjust or calibrate a MaxTrac radio requires the MaxTrac RADIO SERVICE SOFTWARE package (RVN4019 for $5.25^{\prime \prime}$ drives and RVN4020 for 3.5" drives).

A personal computer and the appropriate software diskette will be required in addition to the items listed in the Recommended Test Equipment paragraph. Table 2, below, details the items required for field programming.

We strongly suggest the servicer become familiar with the programming techniques applicable to the MaxTrac radios.

## 3. MAINTENANCE AND TROUBLESHOOTING PROCEDURES

These troubleshooting charts allow you to trace a problem to a specific board in the radio. Each radio has five boards. A switch board, and a front panel (LED) board in the control head, an RF power amplifier board in the heat sink casting and an RF board and a logic board mounted in the chassis. Start troubleshooting with the "Basic Troubleshooting" which will refer you to other charts depending on the symptoms observed. Also refer to Table 3, Error Tones.

Table 2. Field Programming Items

| ITEM | KIT/PART NO. | DESCRIPTION |
| :---: | :---: | :---: |
| 1. | RVN4020 <br> RVN4019 | RADIO SERVICE SOFTWARE (on $31 / 2^{\prime \prime}$ disc) RADIO SERVICE SOFTWARE (on $51 / 4^{\prime \prime}$ disc) <br> Used for programming and servicing MaxTrac radios on IBM PC-XT, or IBM PC-AT computers equipped as follows: IBM DOS 3.1 or higher, RS-232 Asynchronous Serial Communications Adapter, and 512 k byte (min.) RAM memory. Software user's manual included. |
| 2. | 01-80353A74 | RADIO INTERFACE BOX (RIB). Shifts voltage level to enable communications between the radio and the computer's RS-232 Serial Communications Adapter. |
| 3. | 01-80357A57 | WALL-MOUNT POWER SUPPLY. Used to supply power to the RIB. For 120 V ac use only. |
| 4. | $\begin{aligned} & 30-80369 \text { B } 71 \\ & 30-80369 \text { B } 72 \end{aligned}$ | IBM PC-XT COMPUTER INTERFACE CABLE IBM PC-AT COMPUTER INTERFACE CABLE Connects the appropriate computer's RS-232 Asynchronous Serial Communications Adapter to the Radio Interface Box. IBM PC-XT computers use a 25-pin connector cable and IBM PC-AT computers use a 9-pin connector cable. |

5. $30-80070$ N01 MaxTrac RADIO INTERFACE CABLE. Connects the Max Trac radio to the Radio Interface Box.

It is recommended to use the following test equipment:

R2001D Communications System Analyzer, or R2200B Service Monitor, or R2012 Trunking Service Monitor, or R2021D Trunking Service Monitor

R1011B Power Supply

## Rl037A Digital Multimeter, or 1024 B Digital Multimeter

Also refer to Table 4 for MaxTrac radio's recommended service aids.

Table 3. Error Tones

## TONES

Low pitched tone ( 163 Hz ) for 5 seconds after turn on.

Try to reprogram tuning code plug. If this does not clear the fault or if the problem recurs, replace the logic board.
A volume set tone ( 450 Hz ) for 1 second, followed by an illegal function tone Reprogram or replace the code plug. after turn on.

| Continuous pattern of one beep ( 1000 Hz ) followed by a pause after turn on. | Microprocessor RAM failure. Replace the logic board. |
| :---: | :---: |
| Continuous pattern of two beeps ( 1000 Hz ) followed by a pause after turn on. | External RAM failure. Replace the logic board. |
| Continuous pattern of three beeps ( 1000 Hz ) followed by a pause after turn on. | Watchdog error. Reprogram the microprocessor Config register. If the error exists, replace the logic board. |
| ( 1000 Hz ) followed by a pause after | External ROM checksum failure. Reprogram or replace external ROM. | gram or replace external ROM.

Table 4. Recommended Service Aids

| ITEM | PART NO. | DESCRIPTION |
| :---: | :---: | :---: |
| 1. | 28-84606M01 | Mini-UHF connector (male) for coax cable equivalent. For mating to antenna connector. crimping tool. |
| 2. | 30-80093P01 | RF board extension cable for troubleshooting. |
| 3. | 30-80373B41 | VCO test cable. Provides the interface between the RF board and the test equipment for troubleshooting. |
| 4. | 30-80373B42 | Test cable. Mini-UHF to "N"-type RF coax (low loss) cable ( $14^{\prime \prime}$ ) used for connecting the radio antenna connector to the RF test instruments. |
| 5. | 58-80367B21 | Mini-UHF male to "N"-type female adapter |
| 6. | 58-80367B22 | Mini-UHF male to UHF female adapter |
| 7. | 66-80388A26 | Crimping tool. For customer installations requiring crimping of mini-UHF RF connector (28-84606M01) onto antenna cable. |
| 8. | 66-80947W01 | Extraction tool. Provides the ability to remove the terminal pins (29-84249N01) from the 16-pin expanded option connector housing (15-80922V01). |

## Notes:

1. For optimum performance, diodes, transistors and integrated circuits must be ordered by MOTOROLA part numbers.
2. When ordering quartz crystal units or ceramic resonators, specify carrier frequency, crystal (or resonator) frequency, and crystal (or resonator) type number.

| $\begin{aligned} & \text { REFERENCE } \\ & \text { SYMBOL } \end{aligned}$ | MOTOROLA PART NO. | DESCRIPTION |

Notes:

1. For optimum performance, diodes, transistors, integrated circuits, crystal units and ceramic filters must be ordered by MOTOROLA part numbers.
2. When ordering quartz crystal units or ceramic resonators, specify carrier frequency, crystal (or resonator) frequency, and crystal (or resonator) type number.

FLF1016A 900MHz POWER AMPLIFIER, 12W includes:
FLF5515A 12W PA BOARD
FLN5046A 12W HEAT SINK HARDWARE KIT
FLF5515A 12W PA BOARD
PL-1028-O
