SPECIFICATIONS*

Frequency Range:	29-42 MHz, 35-50 MHz
Battery Drain:	
Receive	
Squelched	1.1 Amperes at 13.8 Volts
Unsquelched	3.0 Amperes at 13.8 Volts (15 Watts Output)
Transmitter:	
60 Watts	16 Amperes at 13.2 Volts
110 Watts	28 Amperes at 13.6 Volts
Frequency Stability:	0.0005% depending on model
Temperature Range:	-30°C (-22°F) to +60°C (+140°F)
Duty Cycle:	100% Receive, 14% Transmit
<u>Transmitter</u>	
Transmit Output Power:	60/110 Watts
Conducted Spurious:	-85 dB
Modulation:	±5 kHz
Audio Sensitivity:	55 to 110 millivolts
Audio Frequency Characteristics:	Within +1 dB to -3 dB of a 6 dB/octave pre-emphasis 300 Hz and within +1 dB to -4.5 dB of a 6 dB/octave pre-emphasis 3000 Hz per EIA standards. Post-limiter filter per FCC and EIA.
Distortion:	Less than 2% (1000 Hz) Less than 5% (3000 Hz)
Deviation Symmetry:	0.3 kHz maximum

SPECIFICATIONS*

Maximum Frequency Separation:	29-42 MHz, 35-50 MHz
Microphone Load Impedance:	600 Ohms
Power Adjust Range:	100% to 50% of rated power (U.S.A. Models)
RF Output Impedance:	50 Ohms
FM Noise:	-50 dB
<u>Receiver</u>	
Audio Output:	15 Watts with less than 3% distortion (To 4.0 ohm speaker)
Sensitivity:	0.35 μ V (STD)/0.22 μ V (PRE) 12 dB SINAD (IEIA method)
Selectivity:	-85 dB EIA Two-Signal Method (20 kHz Channels)
Spurious Response:	-100 dB
Intermodulation 20 kHz:	-85 dB
Maximum Frequency Separation:	29-42 MHz, 35-50 MHz
Frequency Response:	Within +1, -3 dB of 6 dB/octave de-emphasis from 300 to 3000 MHz (1000 Hz reference)
RF Input Impedance:	50 Ohms
Hum/Noise ratio:	
Unsquelled	-50 dB
Squelched	-70 dB
Channel Spacing:	20 kHz

* These specifications are typical values intended primarily for use of the service technician. Refer to the appropriate Specifications Sheet for the complete specifications.

DESCRIPTION

Ericsson Inc. synthesized **ORION** mobile radio combinations are completely solid-state, utilizing microcomputer technology and integrated circuits to provide high-quality, high-reliability radios. Standard low band combinations are equipped with:

- Microcomputer Controlled Frequency Synthesizer
- 0.0005% Frequency Stability
- Noise Blanker
- Other Structured Options

The basic radio consists of three printed wiring boards mounted in a cast aluminum frame. The three boards are:

1. The Control Logic/IF board
2. The Frequency Synthesizer/Receiver board
3. The Power Amplifier/Exciter board

The radio is of double-layer construction with tuning adjustments easily accessible.

The Control Logic/IF Board is located on the top of the radio, while the Power Amplifier/Exciter and the Synthesizer/Receiver boards are located on the bottom of the radio.

SYNTHESIZER

The synthesizer consists of a microcomputer, **Electrically Erasable Read Only Memory (EEPROM)**, a frequency synthesizer IC, transmit and receive Voltage Controlled Oscillator's (**VCO**) and associated circuitry. The frequency synthesizer under control of the microcomputer generates all transmit and receive **Radio Frequencies (RF)**.

The EEPROM stores binary data for all radio frequencies, Channel Guard tones/digital codes and the timing function of the **Carrier Control Timer (CCT)**. The microcomputer accesses the EEPROM and provides the correct WALSH bits to the Channel Guard circuitry to generate the correct Channel Guard tone or digital code on a per-channel basis.

PROGRAMMING

The EEPROM allows the radio to be programmed or reprogrammed as needed to adapt to changing system

requirements. Radio Frequencies, Channel Guard tone and digital codes and the CCT function can be reprogrammed.

The EEPROM can be reprogrammed through the radio front connector using a personal computer. This programmer allows all information to be loaded simultaneously.

Programming instructions are provided in the respective Programmer Maintenance Manuals.

TRANSMITTER

The transmitter consists of the frequency synthesizer, transmitter VCO and a **Power Amplifier (PA)** assembly. The PA assembly consists of a PA board mounted on a heat sink assembly. The PA board also contains the exciter, low-pass filter and antenna switching diode.

Audio and Channel Guard circuitry for the transmitter is located on the Control Logic/IF Board.

RECEIVER

The receiver consists of the frequency synthesizer, RX VCO, injection amplifiers, front end, IF, limiter detector and noise blanker circuitry. Audio, squelch and Channel Guard circuitry for the receiver is located on the Control Logic/IF Board.

SYSTEM CONTROL FUNCTION

A microprocessor on the Control Logic/IF board controls the frequency synthesizer, the TX ON/OFF, the decoding of CTCSS tones, the generation of CTCSS tones,. etc. The audio processor circuitry of the transmitter and the receiver are located on the Control Logic/IF board. Squelch circuitry and a connection to the digital **AEGIS** circuit is also located on the Control Logic/IF board.

OPERATION

Complete operating instructions for the **ORION** two-way radio are provided in Operator's Manual **LBI-38888** for the control unit used.

MAINTENANCE

The Service Section in maintenance manual **LBI-39140** contains the maintenance information to service this radio. The Service Section includes:

- Disassembly Procedures

- Replacement of IC's, chip capacitors and resistors
- Alignment procedures for the transmitter and receiver
- Troubleshooting Procedures and wave forms
- A mechanical layout for the radio is found in **ORION** Assemblies Maintenance Manual **LBI-38909**.
