DESCRIPTION

This manual contains the equipment configuration drawings and cable inter and intrarack wiring diagrams required for installation and maintenance of a Simulcast System with up to 10 sites and up to 20 channels. It also contains the cable connection lists to provide the detailed rack interconnect cabling information that supports the wiring diagrams referenced above. They also identify the location of the equipment modules in each shelf. Being familiar with the information contained on each of these drawings make servicing the simulcast system easier.

The configuration drawings identify the shelves and the site/channel associations of each (where applicable) of the various shelves located in the Digital, Analog, GETC, and Test Equipment racks used in the Simulcast Communications System. The configuration drawings also show the rear view of the racks to identify the interconnecting jack and plug connectors for each shelf on the digital and analog equipment racks.

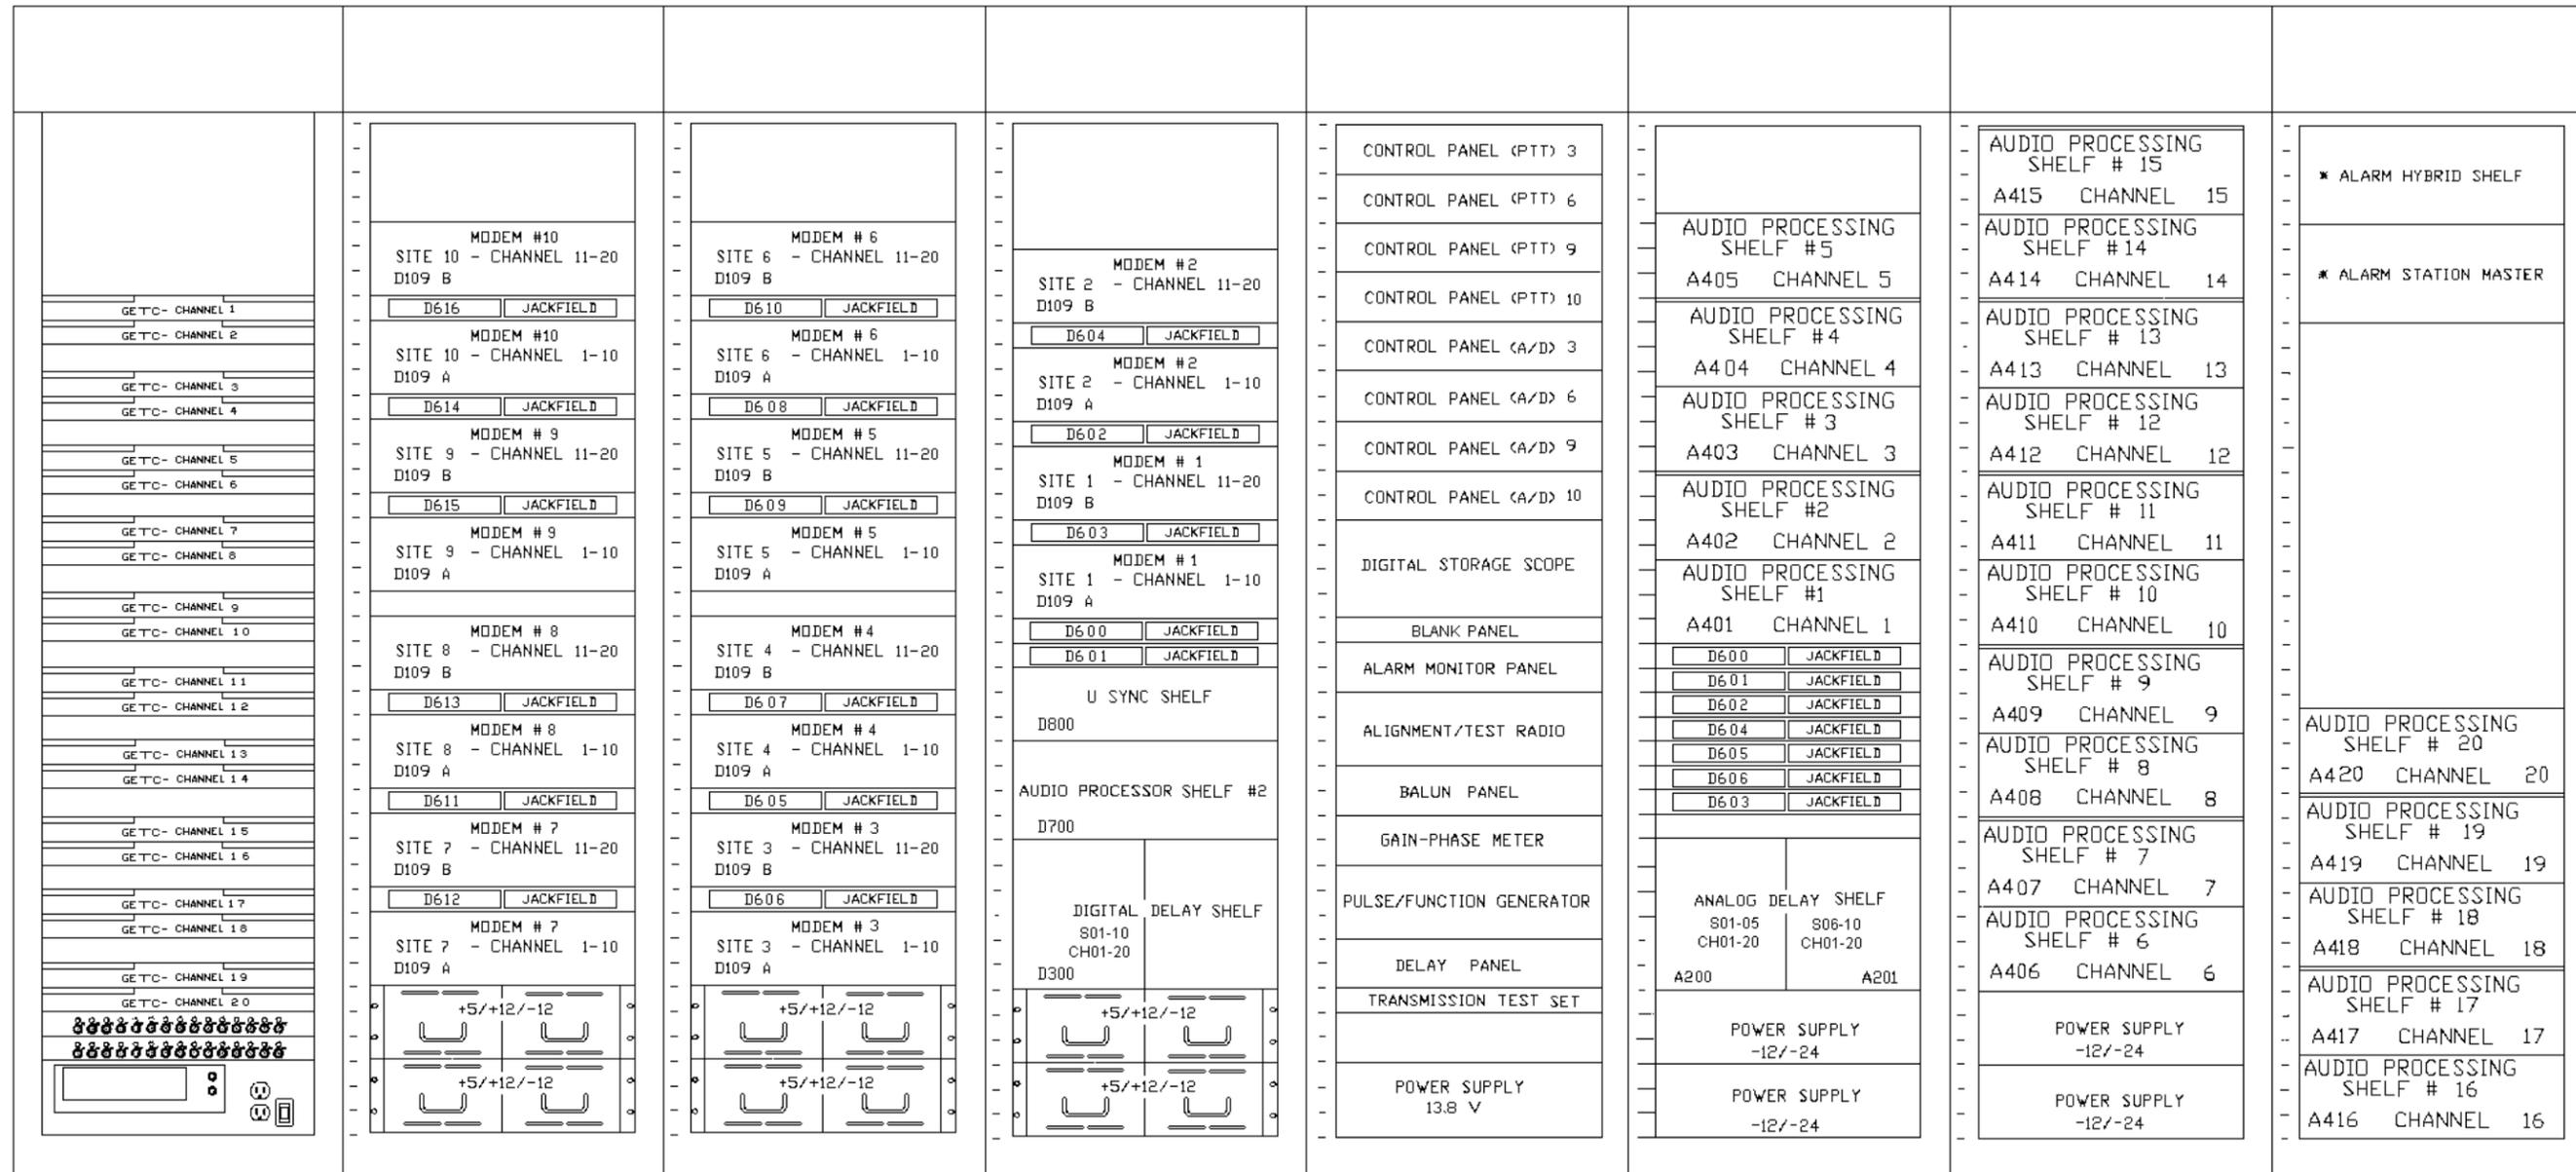

Field installation drawings show the cabinet interconnect cabling between the simulcast digital, analog and test equipment racks and also between digital rack 1 of the simulcast equipment and the GETC, RIC, and Site Controller cabinets. Detailed cable termination points are given on Cable Connection List 344A4886 referenced on the field installation drawings.

DC Power Wiring Diagrams show the power distribution wiring from the power supplies through the power panel to the various shelves in each equipment rack. Cable Connection List 344A4223 identifies the location of each module within the rack and details the interrack cabling connections.

Digital Cross Connect Diagrams define the cable connections between the digital cross connect panel and connector panels #1 and 2, digital delay shelf, analog processing shelf #2, and the universal sync shelf. The diagrams trace the digital channel paths from the GETC/GETC interface module through the connector panel and digital cross connect panel to the digital delay shelf. In addition, the diagrams show the data and clock interconnections, for each site, through the modems and jackfields to the digital cross connect panel.

Analog Cross Connect Diagrams show the interconnections between the analog processing shelf #1, the connector panel, and the analog delay shelf that house the voice channels for the simulcast system. It also shows the 150 baud and analog BSEL connections with the digital cross connect panel.
