SPECIFICATIONS*

GENERAL

FCC FILING NUMBER	ES-34-A
DIMENSIONS	
Desk-Mate Station	30-3/8" x 14" x 25-1/2"
Pole-Mount Station	42" x 23" x 12-1/2"
Floor-Mount Station	69" x 22" x 23"
WEIGHT	
Desk-Mate	Approximately 150 pounds
Pole-Mount	Approximately 200 pounds
Floor-Mount	Approximately 300 pounds
DUTY CYCLE (Transmit & Receive)	Continuous
INPUT VOLTAGE	117 VAC, ±10%, 50/60 Hz
INPUT POWER	Transmit: 1.66 amps max, 195 watts Receive: 0.8 amps max, 95 watts
OPERABLE TEMPERATURE RANGE	-30°C (-22°F) to +60°C (+140°F)
FREQUENCY RANGE	952-960 Megahertz

TRANSMITTER

(Includes Converter & Driver Transmitter)

RF Power Output: **	10 watts
RF Output Impedance:	50 ohms
Spurious and Harmonic Emission:	-60 dB
Modulation Deviation:	0 to ±15 kHz (36F3)
Frequency Stability:	±0.0002% from -30°C. to +60°C., ±25°C. Reference
FM Noise:	-50 dB
Audio Response:	Within +1 and -3 dB of 6 dB/octave pre-emphasis, 300 to 3000 Hz per E1A
Audio Distortion:	Less than 3%

RECEIVER

(Includes Converter & 450 MHz Rec)

RF Input Impedance:	50 ohms
Channel Spacing:	100 kHz
Sensitivity:**	
E1A 12 dB SINAD	1.0 µV
20 dB Quieting	1.25 µV
Critical Squelch	0.60 µV
Channel Guard Squelch	10 dB SINAD
Selectivity:	
E1A 2-Signal (100 kHz channels)	-90 dB
Frequency Stability (1st Oscillator)	+0.0002% from -30°C. to +60°C. +25°C. Reference
Modulation Acceptance:	±19 kHz
Spurious and Image Rejection:	-60 dB
Audio Response	Within +1 and -8 dB of 6 dB/octave de-emphasis, 300 to 3000 Hz
Audio Output:	5 watts at 3.5 ohms +18 dBm at 600 ohms at less than 5% distortion

* These specifications are intended primarily for use by the serviceman. Refer to the appropriate Specification Sheet for complete specifications.

** Rating is based on using a separate antenna for the receiver and transmitter. When using a single antenna with antenna relay, power output and receiver sensitivity will be 1.5 dB lower.

DESCRIPTION

General Electric MASTR Progress Line Desk Mate Stations are attractively styled base stations that operate in the 952-960 megahertz band. This band is normally utilized for radio link operation in radio controlled base station systems.

The Desk Mate cabinet can be located on either side of a desk to provide additional working space. All operating controls are conveniently located on the control panel on the front of the cabinet. Both the transmitter exciter and the receiver are fully transistorized. Silicon transistors are used throughout for added reliability.

Both side panels on the station cabinet can be easily removed to gain access to the transmitter, receiver and power supply. The transmitter and receiver modules are equipped with centralized metering jacks, and are mounted on swingout chassis for simplified alignment and troubleshooting.

CONVERTER PANEL & SIGNAL GENERATOR

The Converter Panel with built-in Signal Generator provides both transmit receive functions in the 952-960 megahertz band. The panel includes:

- 960 to 450 megahertz receiver converter stage.
- 476-480 to 952-960 megahertz transmitter doubler stage.
- 960 megahertz crystal controlled signal generator.
- Antenna Switching Relay K2651.

TRANSMITTER/DRIVER

The Transmitter/Driver is a single frequency transmitter which provides a 476-480 megahertz signal output to the

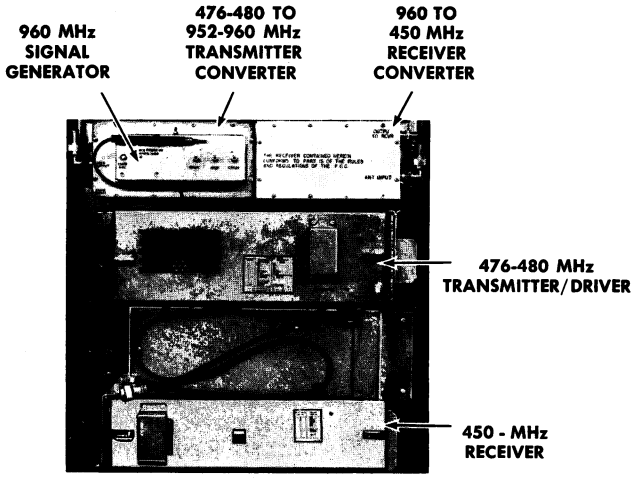

Figure 1 - Typical Station Equipment Arrangement

doubler stage of the converter panel. The transmitter/driver is available with or without Channel Guard capability.

RECEIVER (450-470 MHz)

A 450 megahertz output from the receiver converter stage of the converter panel connects to a single frequency, 450-470 megahertz Receiver (Model 4ER42H11 & H17). This receiver acts as an IF amplifier and is available with and without Channel Guard capability. The receiver is completely contained in an aluminum casting, which provides excellent shielding.

POWER SUPPLY

Station Power Supply Model 4EP38A12 provides operating voltages for both the transmitter and receiver. In addition to plate, screen and bias voltages for the transmitter, the power supply provides:

- Regulated -20 volts for the transistorized transmitter exciter-board.
- Regulated +10 volts for the receiver, receiver converter, and for transmitter Channel Guard.
- Regulated +13.4 volts for transmitter filaments, receiver audio, relays, and pilot lights.

LOCAL CONTROL PANEL

The Local Control Panel is conveniently located on the front of the Desk Mate Station and contains all operating controls for the station.

THE VOLUME control, SQUELCH control, ON-OFF switch, and indicator lamps are located on the front of the control panel below the speaker grille. (For Local/Remote Stations, an INTERCOM-SUPV switch is also located below the speaker grille).

A loudspeaker is mounted on the rear of the control panel. In Local Control Stations, a microphone preamplifier is also mounted on the rear of the control panel.

Microphone Pre-Amplifier A901 (Local Control Station)

Microphone pre-amplifier A901 provides an additional 10-dB gain for use with desk-type microphones. When a military mike or handset is used, the pre-amplifier is disconnected from the circuit by moving lead P1 from J1 to J2 (refer to Front Panel Outline Diagram) so that the signal is connected directly to the transmitter.

The audio signal from the desk-type mike is connected to the pre-amp transistor Q1 through coupling capacitor C1. Following amplifier Q1, the signal is coupled through audio coupling capacitor C2 to the transmitter.

Base bias for Q1 is provided through voltage divider circuit R1 and R2 from the 10-volt regulated supply.

AC Input (Local Control Station)

The 117-volt AC input is connected directly to terminals 1 and 2 of TB903. All power to the station is controlled by switch S901. Turning S901 ON lights the green Power-On light. This indicates that the transmitter and receiver are turned on.

An optional 220/110 VAC Step Down Transformer Kit is available for use when the input line voltage is 220 VAC.

WARNING

117-volts AC is always present at terminals 1 and 2 of TB903, even when S901 is in the OFF position. Always use care when servicing the Control Panel.

Intercom-Supervisory Switch S903 (Local/Remote Station)

Intercom-Supervisory Switch S903 is a two-position toggle switch located in the station transmitter keying circuit. When S903 is in the INTERCOM-SUPV position, transmitter keying is disabled. This prevents station operation by associated Transistorized Control Consoles (giving the station supervisory control), and permits intercom operation between the station and the consoles. The normal (down) position of S903 permits normal remote control station operation.

Optional Handset and Hookswitch

Handset Model 4EM26C10 and Hookswitch 19B204867G2 are optional equipment for the Stations. With the handset on the hookswitch, audio can be heard through speaker LS901. When the handset is lifted off the hookswitch, the normally closed contacts of S1 in the hookswitch open, muting the speaker. The call can be heard in the handset earpiece. The push-to-talk button on the handset is pressed to transmit a message.

The handset plug connects to J901 located on the rear grille of the station cabinet.

CONTROL SHELF ASSEMBLY

Control Shelf 19D416725G1 contains the System Board, the AC input circuit and plug-in printed wire modules with solid state circuitry for up to six DC Remote Control functions and up to twelve Tone Remote Control functions. The Control Shelf also contains the Intercom Module.

AC Input

The 117-VAC input is connected directly to TB1202-1 and -2 on the Control Shelf. Power switch S1201 is wired in series with the Local Control Panel power switch S901. To operate the station, S1201 must always be in the ON position as both S1201 and S901 are in series. Turning off either switch will cut off the power to the station. When both switches are in the On position the green pilot light will be illuminated.

An optional 220/110 Volt AC Stepdown Transformer Kit is available for use when the input line voltage is 220 Volts AC.

WARNING

117 VAC is always present at terminals 1 and 2 of TB1202, even when S1201 is in the OFF position. Always use care when servicing the cabinet power module on the Control Shelf.

Telephone Lines

Instructions for connecting the Remote Station to the telephone line(s) are included in Maintenance Manual LBI-4490 for the Control Shelf.

INITIAL ADJUSTMENT

After the MASTR Desk Mate Station has been installed as described in the Installation Manual, the transmitter, receiver, power supply and Remote Control Shelf must be adjusted by an electronics technician who holds a 1st or 2nd Class FCC Radiotelephone or Radiotelegraph license before the station can be placed in operation.

TEST EQUIPMENT REQUIRED

The following test equipment is required for the adjustment of both transmitter and receiver:

1. A tuning tool and a screwdriver.
2. GE Test Meter Type EX-3-A or EX-8-K, Station Test Metering Panel (Optional), or a 20,000 ohms-per-volt multimeter.
3. A signal source operating at the system frequency (preferably the transmitter which will normally be monitored by the receiver).
4. Wattmeter

TRANSMITTER/DRIVER ADJUSTMENT

The initial adjustment for the transmitter/driver includes checking the frequency and modulation. For the initial adjustment procedure, refer to MAINTENANCE MANUAL LBI-4084 for transmitter Models 4ET59C42 & 43.

TRANSMITTER CONVERTER

The initial adjustment for the transmitter converter includes final tuning, loading, and checking the power output. (While inserting a 25-watt input from the transmitter/driver, check for at least 10 watts at the converter output). For the initial adjustment procedure, refer to MAINTENANCE MANUAL LBI-4082 for the converter panel.

RECEIVER (Models 4ER42H11 & 17)

The initial adjustment for the 450-470 mHz receiver includes adjusting the receiver operating frequency to the output frequency of the receiver converter. To obtain the converter output frequency, subtract the oscillator mixing frequency (marked on the ICOM in the converter) from the system operating frequency. For the initial adjustment procedure, refer to MAINTENANCE MANUAL LBI-4085 for the receiver.

RECEIVER CONVERTER

The initial adjustment from the receiver converter includes matching to the antenna and adjusting frequency to the system operating frequency. For the initial adjustment procedure, refer to MAINTENANCE MANUAL LBI-4082 for the converter panel.

POWER SUPPLY ADJUSTMENT

Local Control Stations

The initial adjustment for power supply Model 4EP38A12 includes setting the VOLUME control (R511) on the power supply to mid-range and setting the SQUELCH control (R512) on the power supply fully clockwise.

After these adjustments are made, the VOLUME and SQUELCH controls on the station Control Panel will normally operate near mid-range.

CONTROL SHELF ADJUSTMENT

The initial adjustment for the control shelf includes:

- Turning the power switch (S1201) ON.
- Adjusting the required Tone or DC controls.

For tone and DC controls adjustment procedures, refer to MAINTENANCE MANUAL LBI-4490 for the Control Shelf.

OPERATION

The basic procedures for receiving and transmitting messages are as follows:

TO RECEIVE A MESSAGE

1. Turn the radio on by pressing the ON button to the ON position. The green power-on light will glow, indicating that power is applied to the unit.
2. Turn the SQUELCH control clockwise (to the right) as far as possible.
3. Adjust the VOLUME control until the "hissing" sound is easily heard but not annoyingly loud.
4. Now, slowly turn the SQUELCH control counterclockwise (to the left) until the "hissing" sound disappears.

The radio is now ready to receive messages from other radios in the system.

TO TRANSMIT A MESSAGE

1. Apply power to the transmitter by pressing the ON button to the ON position. Let the unit warm up for 30 seconds.
2. Press the push-to-talk button on the microphone and speak in a normal (or softer) voice six inches away from the front of the mike. Release the button as soon as the message has been given. The red signal light on the Control Panel will glow each time the microphone button is pressed, indicating that the transmitter is on the air. The receiver is muted whenever the transmitter is keyed.

MAINTENANCE

TEST AND TROUBLESHOOTING PROCEDURES

The individual Maintenance Manuals for the transmitter and receiver describe standard test procedures which the serviceman can use to compare the actual performance of the transmitter or receiver against the specifications of the unit.

In addition, specific troubleshooting procedures are available to assist the serviceman in troubleshooting the transmitter, receiver and power supply.

For best results in servicing the station, the TEST PROCEDURES should be used in conjunction with the TROUBLESHOOTING PROCEDURES. Both sheets are listed in the Table of Contents of the applicable Maintenance Manual.

PREVENTIVE MAINTENANCE

To insure high operating efficiency and to prevent mechanical and electrical failures from interrupting system operations, routine checks should be made of all mechanical and electrical parts. This preventive maintenance should include the maintenance checks listed in Table 1.

TABLE 1

PREVENTIVE MAINTENANCE PROGRAM

	CHECK THE FOLLOWING ONCE A YEAR:	
1.	Transmitter frequency and deviation (FCC requires this check-up ONCE a year).	☐
2.	Measure and record the forward and reflected power to the antenna system.	☐
3.	Check input voltage at TB1202-1 and 02 on control shelf. Reading should be within 20% of 117 VAC. (Also check during routine service calls).	☐
4.	Record transmitter meter readings. Compare with readings taken during initial tune-up. Retune, if necessary.	☐
5.	Record receiver meter readings. Compare with readings taken during initial tune-up. Retune, if necessary.	☐
6.	Check for positive indication of pressure on transmission line pressure gauge (if pressurized line is used).	☐
7.	Clean dust from fan blades and lubricate bearings.	☐
8.	Burnish pitted or coated relay contacts to smooth out metallic deposits or remove the coating.	☐

MAKE THE FOLLOWING MAINTENANCE CHECKS DURING ROUTINE SERVICE CALLS:

1.	Check antenna lines and mast for mechanical stability.	☐
2.	Visually check:	
	External cables	☐
	Internal cables	☐
	Plugs	☐
	Sockets	☐
	Terminal boards	☐
3.	Check for tightness of nuts, bolts, and screw to make sure nothing is working loose from its mounting.	☐
4.	Replace tubes as necessary. (It may be convenient to replace all station tubes during the yearly check-up).	☐

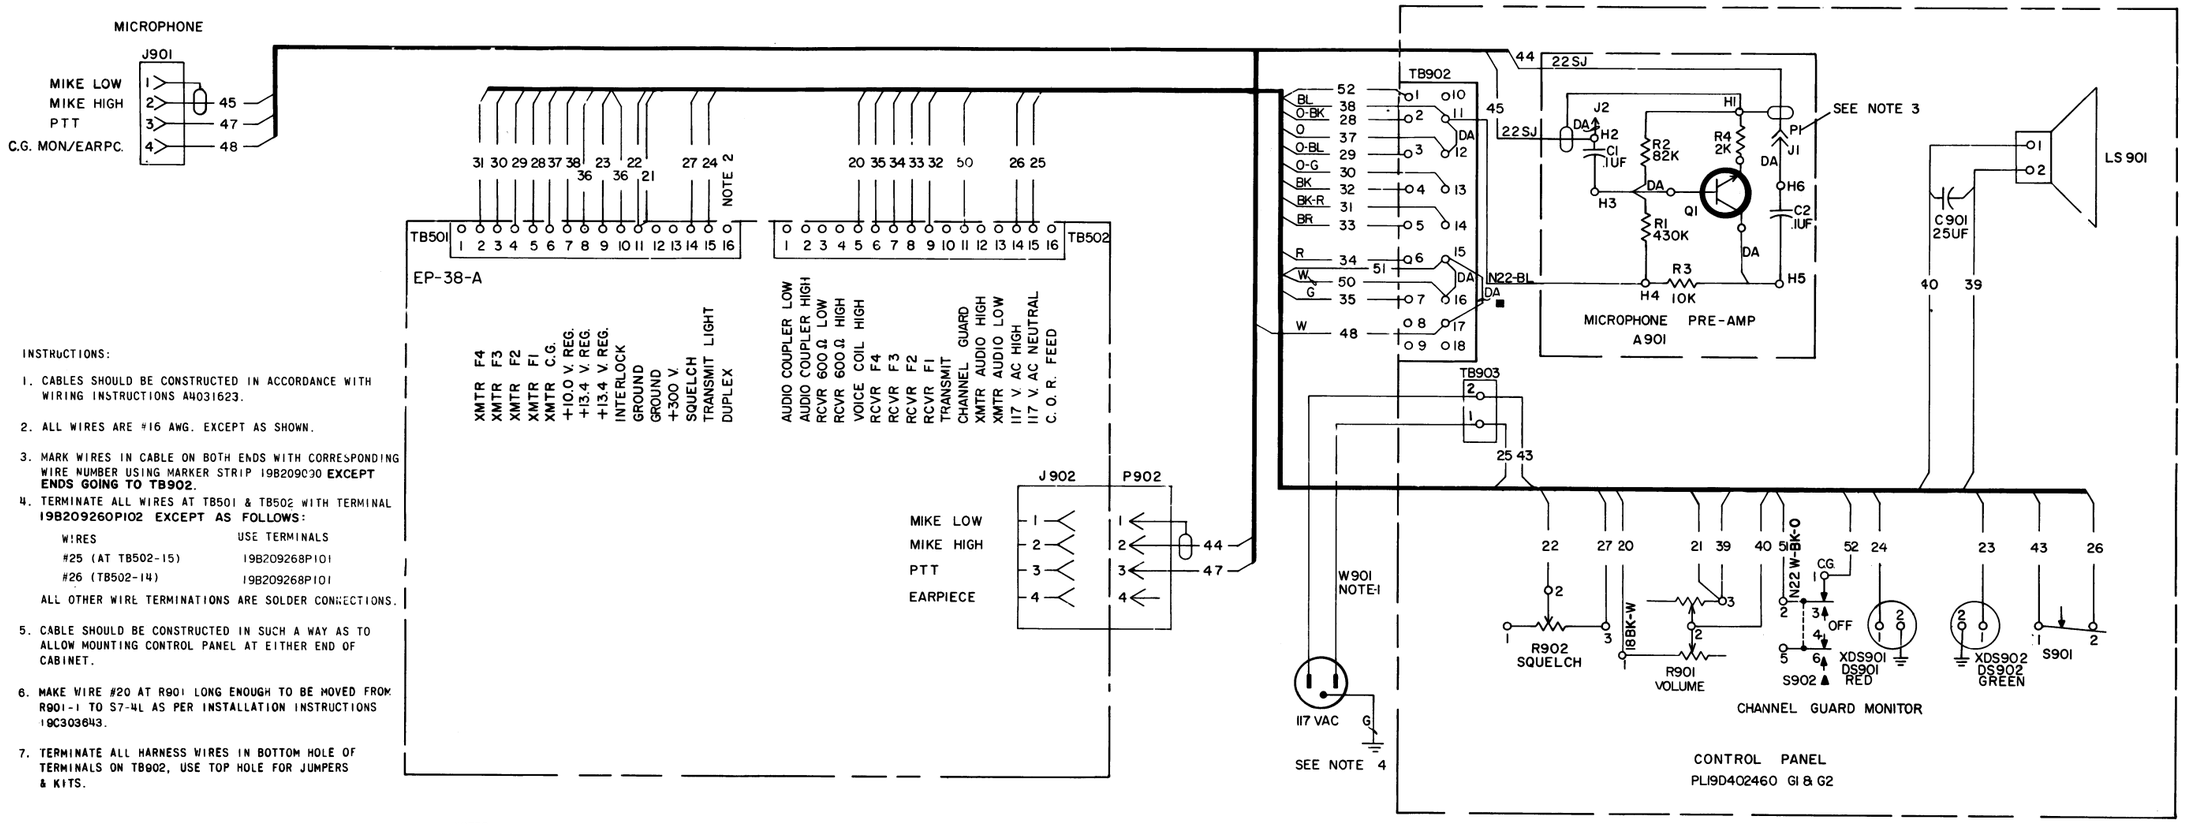
OUTLINE DIAGRAM

MASTR DESK-MATE STATION COMBINATIONS
LOCAL OR LOCAL/REMOTE CONTROL PANEL

(19D402583, Rev. 7)



INSTRUCTIONS:

1. CABLES SHOULD BE CONSTRUCTED IN ACCORDANCE WITH WIRING INSTRUCTIONS A4031623.
2. ALL WIRES ARE #16 AWG. EXCEPT AS SHOWN.
3. MARK WIRES IN CABLE ON BOTH ENDS WITH CORRESPONDING WIRE NUMBER USING MARKER STRIP 19B209030 **EXCEPT ENDS GOING TO TB902.**
4. TERMINATE ALL WIRES AT TB501 & TB502 WITH TERMINAL **19B209260P102 EXCEPT AS FOLLOWS:**

WIRES	USE TERMINALS
#25 (AT TB502-15)	19B209268P101
#26 (TB502-14)	19B209268P101

ALL OTHER WIRE TERMINATIONS ARE SOLDER CONNECTIONS.

5. CABLE SHOULD BE CONSTRUCTED IN SUCH A WAY AS TO ALLOW MOUNTING CONTROL PANEL AT EITHER END OF CABINET.
6. MAKE WIRE #20 AT R901 LONG ENOUGH TO BE MOVED FROM R901-1 TO S7-4L AS PER INSTALLATION INSTRUCTIONS 19C303643.
7. TERMINATE ALL HARNESS WIRES IN BOTTOM HOLE OF TERMINALS ON TB902, USE TOP HOLE FOR JUMPERS & KITS.

NOTES:

1. PLUG OF W901 SHOULD BE INSERTED SO THAT WIRE #25 CONNECTS TO NEUTRAL OF BUILDING WIRING SYSTEM.
2. IF RECEIVER MUTE IS NOT DESIRED, MOVE N22-BL WIRE INSIDE 4EP38A FROM TB501-16 TO TB501-7.
3. WHEN USING MIL. MIKE OR HANDSET, REMOVE PRE-AMP A901 FROM CIRCUIT BY MOVING P1 FROM J1 TO J2.
4. CONNECT TO CONVENIENT CHASSIS MOUNTING SCREW.

IN ORDER TO RETAIN RATED EQUIPMENT PERFORMANCE, REPLACEMENT OF ANY SERVICE PART SHOULD BE MADE ONLY WITH A COMPONENT HAVING THE SPECIFICATIONS SHOWN ON THE PARTS LIST FOR THAT PART.

ALL RESISTORS ARE 1/2 WATT UNLESS OTHERWISE SPECIFIED AND RESISTOR VALUES IN OHMS UNLESS FOLLOWED BY K=1000 OHMS OR MEG=1,000,000 OHMS. CAPACITOR VALUES IN PICOFARADS (EQUAL TO MICROMICROFARADS) UNLESS FOLLOWED BY UF=MICROFARADS. INDUCTANCE VALUES IN MICROHENRYS UNLESS FOLLOWED BY MH=MILLIHENRYS OR H=HENRYS.

SEE APPLICABLE PRODUCTION CHANGE SHEETS IN INSTRUCTION BOOK SECTION DEALING WITH THIS UNIT, FOR DESCRIPTION OF CHANGES UNDER EACH REVISION LETTER.

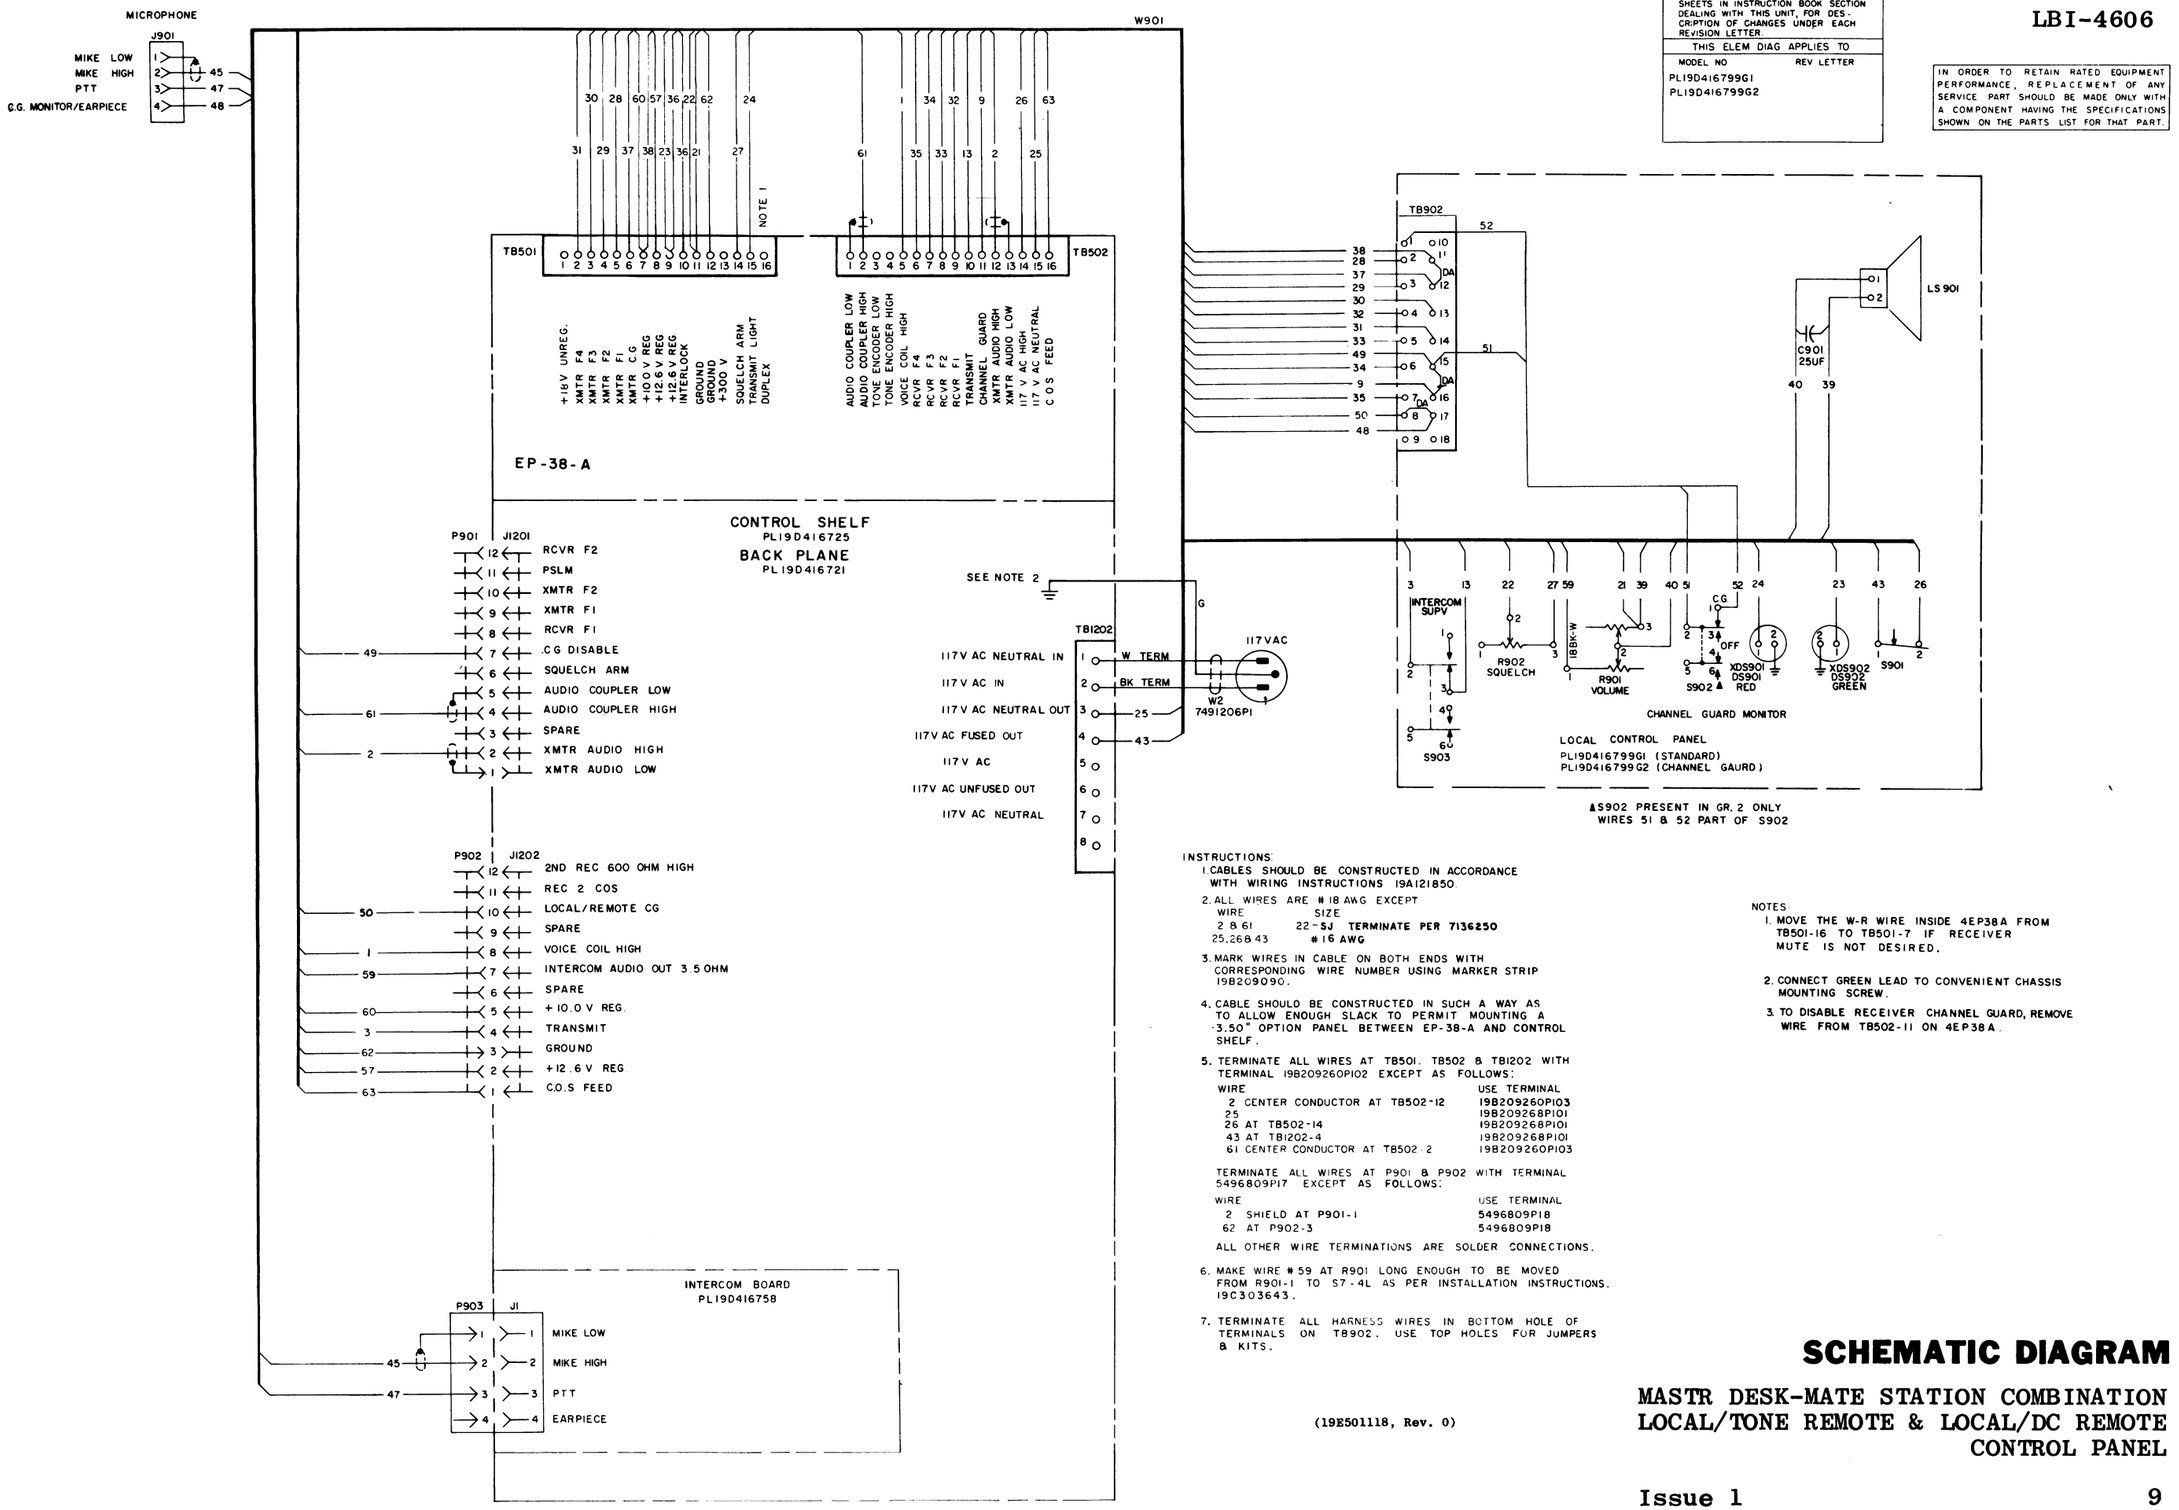
	7354211-P8	Door: (fits either side).
	4035449-P5	Bumper, door: rubber, sim to Atlantic India Rubber 1165.
	N529P38C	Plug. (for cable Knockouts at bottom of assembly).
	7354211-P7	Mounting rack. (2 drilled angles).
	5491682-P13	Lock and Key. Sim to Yale and Towne F7678DX1. Includes Key 5491682-P4 (Yale and Towne BF-10A).
	N80P19008C13	Screw, phillips: 12-24 x 1/2. (Used to secure rack panel assemblies).
	N403P21C13	Lockwasher: external tooth, No. 12. (Used to secure rack panel assemblies).
	19A121317-G2	Interconnection Harness.

*COMPONENTS ADDED, DELETED OR CHANGED BY PRODUCTION CHANGES.

SEE APPLICABLE PRODUCTION CHANGE SHEETS IN INSTRUCTION BOOK SECTION DEALING WITH THIS UNIT, FOR DESCRIPTION OF CHANGES UNDER EACH REVISION LETTER

THIS ELEM DIAG APPLIES TO	
MODEL NO	REV LETTER
PLI9D416799G1	
PLI9D416799G2	

IN ORDER TO RETAIN RATED EQUIPMENT PERFORMANCE, REPLACEMENT OF ANY SERVICE PART SHOULD BE MADE ONLY WITH A COMPONENT HAVING THE SPECIFICATIONS SHOWN ON THE PARTS LIST FOR THAT PART.



▲S902 PRESENT IN GR. 2 ONLY
WIRES 51 & 52 PART OF S902

INSTRUCTIONS:

1. CABLES SHOULD BE CONSTRUCTED IN ACCORDANCE WITH WIRING INSTRUCTIONS 19A121850.
2. ALL WIRES ARE #18 AWG EXCEPT

WIRE	SIZE
2 & 61	22-SJ TERMINATE PER 7136250
25, 26 & 43	#16 AWG

3. MARK WIRES IN CABLE ON BOTH ENDS WITH CORRESPONDING WIRE NUMBER USING MARKER STRIP 19B209090.
4. CABLE SHOULD BE CONSTRUCTED IN SUCH A WAY AS TO ALLOW ENOUGH SLACK TO PERMIT MOUNTING A 3.50" OPTION PANEL BETWEEN EP-38-A AND CONTROL SHELF.
5. TERMINATE ALL WIRES AT TB501, TB502 & TB1202 WITH TERMINAL 19B209260P102 EXCEPT AS FOLLOWS:

WIRE	USE TERMINAL
2 CENTER CONDUCTOR AT TB502-12	19B209260P103
25	19B209268P101
26 AT TB502-14	19B209268P101
43 AT TB1202-4	19B209268P101
61 CENTER CONDUCTOR AT TB502-2	19B209260P103

TERMINATE ALL WIRES AT P901 & P902 WITH TERMINAL 5496809P17 EXCEPT AS FOLLOWS:

WIRE	USE TERMINAL
2 SHIELD AT P901-1	5496809P18
62 AT P902-3	5496809P18

ALL OTHER WIRE TERMINATIONS ARE SOLDER CONNECTIONS.

6. MAKE WIRE #59 AT R901 LONG ENOUGH TO BE MOVED FROM R901-1 TO S7-4L AS PER INSTALLATION INSTRUCTIONS. 19C303643.
7. TERMINATE ALL HARNESS WIRES IN BOTTOM HOLE OF TERMINALS ON TB902. USE TOP HOLES FOR JUMPERS & KITS.

NOTES:

1. MOVE THE W-R WIRE INSIDE 4EP38A FROM TB501-16 TO TB501-7 IF RECEIVER MUTE IS NOT DESIRED.
2. CONNECT GREEN LEAD TO CONVENIENT CHASSIS MOUNTING SCREW.
3. TO DISABLE RECEIVER CHANNEL GUARD, REMOVE WIRE FROM TB502-11 ON 4EP38A.

ORDERING SERVICE PARTS

Each component appearing on the schematic diagram is identified by a symbol number, to simplify locating it in the parts list. Each component is listed by symbol number, followed by its description and GE Part Number.

Service Parts may be obtained from Authorized GE Communication Equipment Service Stations or through any GE Radio Communication Equipment Sales Office. When ordering a part, be sure to give:

1. GE Part Number for component
2. Description of part
3. Model number of equipment
4. Revision letter stamped on unit

These instructions do not purport to cover all details or variations in equipment nor to provide for every possible contingency to be met in connection with installation, operation or maintenance.

Should further information be desired, or should particular problems arise which are not covered sufficiently for the purchaser's purposes, contact the nearest Radio Communication Equipment Sales Office of the General Electric Company.
