

PUBLICATION INDEX

The Publication Index is designed for ease of locating a particular publication used in the servicing of General Electric products. Each product line is identified by a Product Code (PC) number and the Index sheets are collated in numerical order by Product Code number. This listing is for manuals (operation, maintenance, etc.) only and is not to be used for ordering equipment. Refer to Price Catalog for equipment ordering.

The product lines listed below guide you to the corresponding Product Code number. Locate the proper chart by this PC number. The combination nomenclature is reproduced for each product on the chart. Locate in each publication box the identifying digits from the nomenclature and determine the LBI number of the manual desired.

For your convenience, the Publication Index sheets are bound together with a removable fastener so that sheets issued in the future may be added to the Index in the proper PC number order. You may find it convenient to bind the Publication Index in a loose-leaf binder for ease of updating.
