

MONITENNA

FIVE BAND MONITOR ANTENNA MODEL 5094A

This antenna is designed to receive public service broadcasts in the LOW VHF (30-50 MHz), HIGH VHF (148-174 MHz), UHF (450-470 MHz), UHF-T (470-512 MHz) and UHF HB (800-912 MHz) communications bands.

To obtain maximum performance, mount antenna at least 10 ft. from any reflective surface.

WARNING: Installation of this Product near Power Lines is DANGEROUS. For your safety, read the enclosed "DANGER" Booklet before beginning your installation.

INSTRUCTIONS:

- 1. Unfold elements making sure they are straight and locked in position. Grip elements close to pivot rivets to prevent bending of elements when opening.
- 2. Clip retaining bracket to crossarm and secure balun in retaining bracket. Then attach leads from balun to antenna terminals using wingnuts provided. Figure A.
- 3. Connect male "F" fitting on harness to balun and slide weather boot up over fitting. NOTE: For maximum weather protection, fill weather boot with silicone grease or vaseline.
- 4. Mount antenna to mast using U-bolt assembly as shown in Figures B and C.
- 5. Run harness down mast to set location.

 NOTE: It is advisable to use standouts or tape to secure harness to mast to prevent wind damage.
- 6. Attach connector end of harness to set per instructions with set.
